Subject: Proposed Amendment: section R405.3 Performance-based Compliance

Hello.

I've been unable to see where I can have my voice heard in support of the Council adopting the proposed code amendment for performance-based compliance using **carbon emissions** as the main compliance measure.

Because homes and buildings are our state's second largest greenhouse gas emitters, and new homes last for decades, we cannot afford to build Any more homes that depend on fossil fuels.

Only the Building Code Council can ensure that everyone builds to these carbon efficient standards as we must to meet our state's Clean Energy Transformation Act and do our part to prevent runaway climate catastrophe.

Please adopt the proposed amendment to make the residential code focus on carbon efficiency.

Would you please see that my statement delivered to you here will be included in the public comments?

Thank you,

Debbie Stempf
