Subject: Hearing comments: Commercial Model Energy Code

External Email

Thank you for crafting a strong Model Energy Code for the State of Washington. I support adopting a model commercial building code that requires new commercial construction to use clean electric powered technology--heat pumps-- for space and water heating. Reducing the amount of carbon we burn is crucial to slowing the rise in global temperature. I want WA to be leading the way with a strong model code. Please adopt this Code as a Model State governments can use to reduce greenhouse gas emissions from buildings.
