This code proposal would require new residential buildings to install heat pump space heaters for space conditioning.

Proposed code change text: (Copy the existing text from the Integrated Draft, linked above, and then use underline for new text and strikeout for text to be deleted.)

Delete section R403.7.1 and remove 4 from Table R406.2 and renumber subsequent system types.

Add new section as follows:

**R403.13 Heat pump space heating.** Space heating shall be provided by an electric heat pump system.

**Exceptions**

1. Up to 4000 watts (1.1W) of electric resistance heating per square foot of dwelling unit conditioned floor area in climate zone 4 and up to 1.3W of electric resistance heating per square foot of conditioned floor area in climate zone 5.
2. Resistance heating elements integrated into unitary heat pump equipment
3. Solar thermal systems
4. Waste heat and energy recovery systems
5. Supplementary heat in accordance with Section R403.1.2.
6. Other space heating systems as approved

Modify Table R405.2 as follows:

<table>
<thead>
<tr>
<th>Systems</th>
</tr>
</thead>
<tbody>
<tr>
<td>R403.1</td>
</tr>
<tr>
<td>R403.1.2 Heat pump supplemental heat</td>
</tr>
<tr>
<td>R403.3.2 Sealing</td>
</tr>
<tr>
<td>R403.3.1 Equipment and system sizing</td>
</tr>
<tr>
<td>R403.3.3 Duct testing</td>
</tr>
<tr>
<td>R403.3.4 Duct leakage</td>
</tr>
<tr>
<td>R403.3.5 Building cavities</td>
</tr>
<tr>
<td>R403.4 Mechanical system piping insulation</td>
</tr>
<tr>
<td>R403.5.1 Heated water circulation and temperature maintenance system</td>
</tr>
<tr>
<td>R403.6 Mechanical ventilation</td>
</tr>
</tbody>
</table>
Modify the section as follows:

R503.1.2 Heating and cooling systems. New heating, cooling and duct systems that are part of the alteration shall comply with Section R403.

Exceptions:

1. Where ducts from an existing heating and cooling system are extended, duct systems with less than 40 linear feet in unconditioned spaces shall not be required to be tested in accordance with Section R403.2.2.
2. Existing duct systems constructed, insulated or sealed with asbestos.
3. Replacements of space heating equipment shall not be required to comply with Section R403.13 where the rated capacity of the new equipment does not exceed the rated capacity of the existing equipment.

Reason for revisions

We met with several interested parties who expressed concerns with the proposal. We addressed as many of those concerns as possible by making the following edits to the proposal:

• There was a concern that buildings with very low heating demand like those built to the Passive House standards would be required to install oversized heat pump equipment that would not run very often and justify the additional expense. The proposal was updated to allow up to 1.1Wsf in CZ4 and 1.3W/sf of electric resistance for those types of buildings.
• It was noted that this proposal made R403.7.1 redundant, therefore the section and entry from Table R406.2 were eliminated.
• There was a concern that the proposal completely eliminated natural gas options, particularly in light of the increasing availability of natural gas heat pumps. As the proposal is focused primarily on efficiency, it was revised so that either an electric or gas heat pump can be used to meet the requirement. This revision also made it unnecessary to modify the fuel normalization table.
• There was a concern that the “other systems as approved” was too broad, so it was eliminated.

Original Reason Statement

Purpose of code change:

Requiring space heating to be all-electric eliminates a significant source of fossil fuel combustion in buildings, and is generally 2-4x more energy efficient than either fossil fuel or electric resistance heating. This proposal aligns with State policy to increase energy efficiency by 70% by 2031. Additionally, this proposal will significantly reduce emissions and is aligned with State policy to achieve the broader goal of building zero fossil-fuel greenhouse gas emission homes and buildings by the year 2031. According to analysis done using data from the 2021 Washington State Energy Strategy, we need to reduce the commercial buildings sector emissions by 44% to keep on track to meet our 2050 climate goals. To achieve this, the State will need to double the proportion of annual sales of heat pumps from 21% of all residential space
heating equipment in 2020 to 39% by 2030. To get to this increase in market penetration of heat pumps, the Washington State Energy Code should require all residential space heating to be all-electric in the 2021 code cycle. See Supplemental Attachment for further details on economics, emissions reduction and market penetration.

What the proposal does:

The proposal requires that space heating be provided by heat pump equipment. It includes key exceptions to foster flexibility, usability and enforceability:

- It allows up to 1000W of resistance heating per dwelling unit. This allows for spot heating applications (such as heated floors in a bathroom) and for very well-insulated homes with very small heating loads (such as those built to the PHIUS standard) to be served by inexpensive systems.
- It is explicit that the resistance heating elements that are integrated into unitary heat pumps - such as crankcase heaters - solar thermal systems and waste heat and energy recovery systems are not impacted by this new language.
- It allows supplementary heat in accordance with WSEC’s supplementary heat control requirements that already address this system configuration.

The proposal then has language in section R503 to ensure that these requirements would not apply to simple equipment replacements. The exception is configured so that it is only available when new equipment is the same size as the equipment being replaced. This ensures that the heat pump requirements will not trigger an electrification retrofit for equipment replacement unless it is a major system reconfiguration with a larger piece of equipment.

This proposal does not impact larger, more complex systems that serve multiple dwelling units since those systems are already referred to the commercial section of the code by R403.8.

Your amendment must meet one of the following criteria. Select at least one:

☐ Addresses a critical life/safety need. ☐ Consistency with state or federal regulations.

☐ The amendment clarifies the intent or application of the code. ☐ Addresses a unique character of the state.

☒ Addresses a specific state policy or statute. ☐ Corrects errors and omissions.

(Note that energy conservation is a state policy)

Check the building types that would be impacted by your code change:

☒ Single family/duplex/townhome ☐ Multi-family 4 + stories ☐ Institutional

☒ Multi-family 1 – 3 stories ☐ Commercial / Retail ☐ Industrial

Economic Impact Data Sheet

Is there an economic impact: ☑ Yes ☐ No

Briefly summarize your proposal's primary economic impacts and benefits to building owners, tenants, and businesses. If you answered “No” above, explain your reasoning.

Construction costs for heat pump space heaters are often, but not always, higher than for conventional natural gas or electric resistance space heaters. When eliminating the cost of gas infrastructure running to the building and the cost of a separate air conditioner for space cooling, all-electric homes are generally less expensive than mixed fuel homes. Annual energy costs for heat pump space heaters are much lower than for electric resistance heating, but comparable with gas heating, at current rates (World Bank long term forecasts indicate an increase of over 80% in gas prices over the coming decade.) When including the Washington State social cost of carbon, heat pump space heating is more cost effective than both gas heating and electric resistance heating over the life cycle analysis horizon.

Given the state’s climate goals and policy, this Energy Code proposal will help ensure new assets permitted beginning July 1, 2023 will not need to be immediately retrofitted.

Provide your best estimate of the construction cost (or cost savings) of your code change proposal? (See OFM Life Cycle Cost Analysis tool and Instructions; use these Inputs. Webinars on the tool can be found Here and Here)

Upfront cost savings is $1.14/ sq ft or $2,725 per home.

The life cycle cost savings, not including the social cost of carbon, is $3.41/ sq ft or $8,192 per home.

The life cycle cost savings, including the social cost of carbon, is $4.57/ sq ft or $10,974 per home.

Show calculations here, and list sources for costs/savings, or attach backup data pages

See attached supplemental.

Provide your best estimate of the annual energy savings (or additional energy use) for your code change proposal?

Annual energy savings of 5.5 kBTU/ sq ft

Annual energy savings of 13,140 kBTU per home

(For residential projects, also provide Click here to enter text. KWH/KBTU / dwelling unit)

Show calculations here, and list sources for energy savings estimates, or attach backup data pages

List any code enforcement time for additional plan review or inspections that your proposal will require, in hours per permit application:

Instructions: Send this form as an email attachment, along with any other documentation available, to: sbcc@des.wa.gov. For further information, call the State Building Code Council at 360-407-9255.

All questions must be answered to be considered complete. Incomplete proposals will not be accepted.
No increase in plan review or inspection time.

**Small Business Impact.** Describe economic impacts to small businesses:

No impact on small businesses, since this is the residential code.

**Housing Affordability.** Describe economic impacts on housing affordability:

No impact on housing affordability since this will actually save builders money.

**Other.** Describe other qualitative cost and benefits to owners, to occupants, to the public, to the environment, and to other stakeholders that have not yet been discussed:

Improve air quality and reduce greenhouse gas emissions.

**Instructions:** Send this form as an email attachment, along with any other documentation available, to: sbcc@des.wa.gov. For further information, call the State Building Code Council at 360-407-9255.

All questions must be answered to be considered complete. Incomplete proposals will not be accepted.
