Hello,

I am a concerned citizen. I am watching our cities under protect urban areas from heat episodes due to global warming. Being proactive about the details of creating shade, protecting and keeping urban trees and forest can be helpful to all of us.

Please work to extend and broaden the green belts of all areas, especially near streams. We are having a crisis of fish dying in our rivers during the summer.

Protect and preserve all greenbelts, forest and trees in urban areas. Learn new development practices that conserve the land in its natural forms.

Maximize the carbon drawdown by enforcing conservation standards on all developments, especially large big box. Smaller footprints and conservation of existing trees is critically important.

Continue to support citizen needs for extreme heat events.

Thank you,

Sherry Buckner
