PREFACE							
51-51-001	Authority.	NA	NA	NA	Keep existing amendment		
	These rules are adopted under the authority of chapter 19.27 RCW .						
51-51-002	Purpose	NA	NA	NA	Keep existing amendment		
	The purpose of these rules is to implement the provisions of chapter 19.27 RCW , which provides that the state building code council shall maintain the State Building Code in a status which is consistent with the purpose as set forth in RCW 19.27.020 . In maintaining the codes, the council shall regularly review updated versions of the codes adopted under the act, and other pertinent information, and shall amend the codes as deemed appropriate by the council.						
51-51-003	International Residential Code	NA	NA	NA	Modify Existing Amendment		Editorial, Modification needed is editorial. Update code year and adjust appendices as necessary.
	The 2021 edition of the <i>International Residential Code</i> as published by the International Code Council is hereby adopted by reference with the following additions, deletions, and exceptions: Provided that chapters 11 and 25 through 43 of this code are not adopted. Energy Code is regulated by chapter 51-11R WAC ; Plumbing Code is regulated by chapter 51-56 WAC ; Electrical Code is regulated by chapter 296-46B WAC or Electrical Code as adopted by the local jurisdiction. Appendix AF, Radon Control Methods, Appendix AQ, Tiny Homes, and Appendix AWU, Dwelling Unit Fire Sprinkler Systems, are included in adoption of the International Residential Code.						
51-51-007	Exceptions	NA	NA	NA	Modify Existing Amendment		Editorial, Modification needed is editorial. Pronouns to change to Their
	The exceptions and amendments to the International Residential Code contained in the provisions of chapter 19.27 RCW shall apply in case of conflict with any of the provisions of these rules. The provisions of this code do not apply to temporary growing structures used solely for the commercial production of horticultural plants including ornamental plants, flowers, vegetables, and fruits. "Temporary growing structure" means a structure that has the sides and roof covered with polyethylene, polyvinyl, or similar flexible synthetic material and is used to provide plants with either frost protection or increased heat retention. A temporary growing structure is not considered a building for purposes of this code. The provisions of this code do not apply to the construction, alteration, or repair of temporary worker housing except as provided by rule adopted under chapter 70.114A RCW or chapter 37, Laws of 1998 (SB 6168). "Temporary worker housing" means a place, area, or piece of land where sleeping places or housing sites are provided by an employer for his or her employees or by another person, including a temporary worker housing operator, who is providing such accommodations for employees, for temporary, seasonal occupancy, and includes "labor camps" under RCW 70.54.110. Codes referenced which are not adopted through RCW 19.27.031 or chapter 19.27A RCW shall not apply unless specifically adopted by the authority having jurisdiction. The standards for liquefied petroleum gas installations shall be NFPA 58 (Liquefied Petroleum Gas Code) and NFPA 54 (National Fuel Gas Code). All other fuel gas installations shall be regulated by the International Mechanical Code and International Fuel Gas Code.						

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
51-51-008	Implementation	NA	NA	NA	Modify Existing Amendment		Editorial, Modification needed is editorial.
	The International Residential Code adopted by chapter 51-51 WAC shall become effective in all counties and cities of this state on March 15, 2024 November 1, 2026 .						
CHAPTER 1 SCOPE AND ADMINISTRATION (Part I Administrative)							
51-51-01010	Scope and General Requirements	R101.2	R101.2	Original amendment created to bring a sprinkler exception for lodging houses. (WSR 15-16-086) Next Modification to amendment in 2018 cycle addressed appendix renumbering. (WSR 19-16-156) Last revision to amendment language occurred in the 2021 Cycle and brought modifications necessary to align with model code language. (WSR 22-17-148) Editorial Amendment revises appendix U to WU to avoid confusion (WSR 23-15-030)	Modify Existing Amendment		Proposal Needed. This section has had an opinion written for it see Opinion 24-27 . This Section Needs Work to increase clarity.
	R101.2 Scope. The provisions of the International Residential Code for One- and Two-Family Dwellings shall apply to the construction, <i>alteration</i>, movement, enlargement, replacement, <i>repair, equipment</i>, use and occupancy, location, removal and demolition of detached one- and two-family dwellings, adult family homes, and <i>townhouses</i> not more than three stories above <i>grade plane</i> in height with a separate means of egress and their <i>accessory structures</i> not more than three stories above <i>grade plane</i> in height. EXCEPTIONS: 1. Live/work units located in <i>townhouses</i> and complying with the requirements of Section 508.5 of the <i>International Building Code</i> shall be permitted to be constructed in accordance with the <i>International Residential Code for One- and Two-Family Dwellings</i>. An automatic sprinkler system required by Section 508.5.7 of the <i>International Building Code</i> where constructed under the <i>International Residential Code for One- and Two-Family Dwellings</i> shall conform to Appendix AWU. 2. Owner-occupied lodging houses with one or two guestrooms shall be permitted to be constructed in accordance with the <i>International Residential Code for One- and Two-Family Dwellings</i>. 3. Owner-occupied lodging homes with three to five guestrooms shall be permitted to be constructed in accordance with the <i>International Residential Code for One- and Two-Family Dwellings</i> where equipped with an automatic fire sprinkler system in accordance with Appendix AWU. 4. A care facility with five or fewer persons receiving custodial care within a dwelling unit shall be permitted to be constructed in accordance with the <i>International Residential Code for One- and Two-Family Dwellings</i> where equipped with an automatic fire sprinkler system in accordance with Appendix AWU. 5. A care facility with five or fewer persons receiving medical care within a dwelling unit shall be permitted to be constructed in accordance with the <i>International Residential Code for One- and Two-Family Dwellings</i> where equipped with an automatic fire sprinkler system in accordance with Appendix AWU. 6. A day care facility with five or fewer persons of any age receiving care that are within a single-family dwelling unit shall be permitted to be constructed in accordance with the <i>International Residential Code for One- and Two-Family Dwellings</i> where equipped with an automatic fire sprinkler system in accordance with Appendix AWU.						

Commented [DC1]: The word “unit” is part of the existing amendment but is now a part of model code language for 2024.

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
CHAPTER 2 DEFINITIONS (Part II Definitions)							
51-51-0202	Definition	202	202	Existing prior to adoption of 2003 Codes (WSR 03-18-077) Modified in 2018 codes off-cycle to address increasing the number of bedsfrom 6 to 8. (WSR 21-03-080)	Keep existing amendment		
	ADULT FAMILY HOME. A dwelling, licensed by the state of Washington department of social and health services, in which a person or persons provide personal care, special care, room and board to more than one but not more than six adults who are not related by blood or marriage to the person or persons providing the services. An existing adult family home may provide services to up to eight adults upon approval from the department of social and health services in accordance with RCW 70.128.066 .						
	Definition	202	202	Added in 2018 cycle no rationale in CR document (WSR 19-16-156)	Keep existing amendment		Chapter 11 not adopted per 51-51-003
	BUILDING. Any one- or two-family <i>dwelling</i> or <i>townhouse</i> , or portion thereof used or intended to be used for human habitation, for living, sleeping, cooking or eating purposes, or any combination thereof, or any accessory structure. For the definition applicable in Chapter 11, see Section N1101.6:						
	Definition	202	202	Added in 2018 cycle no rationale in CR document (WSR 19-16-156)	Keep existing amendment		Editorial, Align with Model Code. Definition is for “EXISTING BUILDING”
	BUILDING, EXISTING. Existing building is A <i>building</i> or <i>structure</i> erected prior to the adoption of this code, or one for which a legal building permit has been issued that has passed a final inspection.						
	Definition	202	202	Existing prior to adoption of 2003 Codes (WSR 03-18-077) 2012 cycle modified the definition (WSR 12-16-091) 2021 code off-cycle change to increase from 12 to 16 children. (WSR 23-23-038)	Keep existing amendment		
	CHILD CARE, FAMILY HOME. A child care facility, licensed by Washington state, located in the dwelling of the person or persons under whose direct care and supervision the child is placed, for the care of 16 or fewer children, including children who reside at the home.						
	Definition	202	202	Existing prior to adoption of 2003 Codes (WSR 03-18-077)	Keep existing amendment		
	CHILD DAY CARE, shall, for the purposes of these regulations, mean the care of children during any period of a 24-hour day.						
	Definition	202	202	Added in 2015 cycle, no rationale in CR document. (WSR 15-16-086)	Keep existing amendment		Chapter 11 not adopted per 51-51-003
	CONDITIONED SPACE. For the definition applicable in Chapter 11, see Section N1101.6 An area, room or space that is enclosed within the building thermal envelope and that is directly or indirectly heated or cooled. Spaces are indirectly heated or cooled where they communicate through openings with conditioned spaces, where they are separated from conditioned spaces by uninsulated walls, floors or ceilings, or where they contain uninsulated ducts, piping or other sources of heating or cooling.						
	Definition	202	202	Added in 2018 cycle no rationale in CR document (WSR 19-16-156)	Keep existing amendment		
	DISTRIBUTED WHOLE-HOUSE VENTILATION. A whole-house ventilation system shall be considered distributed when it supplies outdoor air directly (not transfer air) to each dwelling or sleeping unit habitable space (living room, den, office, interior adjoining spaces or bedroom), and exhausts air from all kitchens and bathrooms directly outside.						
	Definition	202	202	Added in 2006 cycle. (WSR 06-16-112) 2009 cycle added owner occupied dwellings to uses considered dwelling units. (WSR 09-17-140) 2012 cycle removed Owner occupied dwellings and added Accessory dwelling units within existing dwellings and smoke alarm interconnection. (WSR 12-16-091) Modified in 2018 cycle. Removed accessory dwelling units within existing dwellings language. (WSR 19-16-156)	Modify Existing Amendment		Proposal needed, Incorporate new model code language. Chapter 11 not adopted per 51-51-003

[illegible]

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	Definition	202	202	Added in 2006 cycle (WSR 06-16-112) 2012 cycle removes language 1,000,000 or less in sales from definition. (WSR 12-16-091)	Keep existing amendment		
	SMALL BUSINESS. Any business entity (including a sole proprietorship, corporation, partnership or other legal entity) which is owned and operated independently from all other businesses, which has the purpose of making a profit, and which has fifty or fewer employees.						
	Definition	202	202	Added in 2018 cycle no rationale in CR document (WSR 19-16-156)	Keep existing amendment		
	TOWNHOUSE UNIT. A single-family <i>dwelling unit</i> in a <i>townhouse</i> that extends from foundation to roof and that has a yard or public way on not less than two sides that extends at least 50 percent of the length of each of these two sides.						
CHAPTER 3 BUILDING PLANNING (Part III Building Planning and Construction)							
51-51-0301	Design Criteria	R301.2	R301.2	Amendment added in 2015 cycle to allow local jurisdiction to designate salt water coastal areas within their jurisdictions (WSR 15-16-086)	Keep existing amendment		
	R301.2 Climatic and geographic design criteria. Buildings shall be constructed in accordance with the provisions of this code as limited by the provisions of this section. Additional criteria shall be established by the local jurisdiction and set forth in Table R301.2. The local jurisdiction shall designate the salt water coastal areas within their jurisdiction.						
	Design Criteria	R301.2.2.10	R301.2.2.10 + R301.2.2.10.1	Amendment added in 2021 cycle to correctly reference the UPC (WSR 22-17-148)	Repeal Existing Amendment		See Significant Change report UPC Amendment / language still effective for requirement.
	R301.2.2.10 Anchorage of water heaters. In <i>Seismic Design Categories</i> D ₀ , D ₁ and D ₂ , and in townhouses in <i>Seismic Design Category</i> C, water heaters and thermal storage units shall be anchored against movement and overturning in accordance with Section M1307.2 or P2801-8 the Uniform Plumbing Code Section 507.2.						
	Design Criteria	R301.5	R301.5	Table amended in 2006 cycle. (WSR 07-16-026) Amendment removed in 2009 cycle (WSR 09-17-140) Amendment to table again in 2015 cycle increasing balcony live loads to align with ASCE 7 and adding footnote J. (WSR 15-16-086)	Keep existing amendment		

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments																																										
	R301.5 Live load. The minimum uniformly distributed live load shall be as provided in Table R301.5. <table><tr><th colspan="3">TABLE R301.5 MINIMUM UNIFORMLY DISTRIBUTED LIVE LOADS (in pounds per square foot)</th></tr><tr><th>Use</th><th>Uniform Loads (psf)</th><th>Concentrated Load (lb)</th></tr><tr><td>Uninhabitable attics without storage^b</td><td>10</td><td>-</td></tr><tr><td>Uninhabitable attics with limited storage^{b, g}</td><td>20</td><td>-</td></tr><tr><td>Habitable attics and attics served with fixed stairs</td><td>30</td><td>-</td></tr><tr><td>Balconies (exterior) and decks^g</td><td>60^j</td><td>-</td></tr><tr><td>Fire escapes</td><td>40</td><td>-</td></tr><tr><td>Guards</td><td>-</td><td>200^{h,i}</td></tr><tr><td>Guard in-fill components^f</td><td>-</td><td>50^h</td></tr><tr><td>Handrail^d</td><td>-</td><td>200^h</td></tr><tr><td>Passenger vehicle garages</td><td>50^a</td><td>2,000^a</td></tr><tr><td>Areas other than sleeping areas</td><td>40</td><td>-</td></tr><tr><td>Sleeping areas</td><td>30</td><td>-</td></tr><tr><td>Stairs</td><td>40^c</td><td>300^c</td></tr></table> For SI: 1 pound per square foot = 0.0479 kPa, 1 square inch = 645 mm, 1 pound = 4.45 N a. Elevated garage floors shall be capable of supporting the uniformly distributed live load or a 2,000-pound concentrated load applied on an area of 4-1/2 inches by 4-1/2 inches, whichever produces the greater stresses. b. Uninhabitable attics without storage are those where the clear height between joists and rafters is not more than 42 inches, or where there are not two or more adjacent trusses with web configurations capable of accommodating an assumed rectangle 42 inches in height by 24 inches in width, or greater, within the plane of the trusses. This live load need not be assumed to act concurrently with any other live load requirements. c. Individual stair treads shall be capable of supporting the uniformly distributed live load or a 300-pound concentrated load applied on an area of 2 inches by 2 inches, whichever produces the greater stresses. d. A single concentrated load applied in any direction at any point along the top. For a guard not required to serve as a handrail, the load need not be applied to the top element of the guard in a direction parallel to such element. e. See Section R507.1 for decks attached to exterior walls. f. Guard in-fill components (all those except the handrail), balusters and panel fillers shall be designed to withstand a horizontally applied normal load of 50 pounds on an area equal to 1 square foot. This load need not be assumed to act concurrently with any other live load requirement. g. Uninhabitable attics with limited storage are those where the clear height between joists and rafters is 42 inches or greater, or where there are two or more adjacent trusses with web configurations capable of accommodating an assumed rectangle 42 inches in height by 24 inches in width, or greater, within the plane of the trusses. The live load need only be applied to those portions of the joists or truss bottom chords where all of the following conditions are met: g1. The attic area is accessed from an opening not less than 20 inches in width by 30 inches in length that is located where the clear height in the attic is not less than 30 inches. g2. The slopes of the joists or truss bottom chords are not greater than 2 units vertical to 12 units horizontal. g3. Required insulation depth is less than the joist or truss bottom chord member depth. The remaining portions of the joists or truss bottom chords shall be designed for a uniformly distributed concurrent live load of not less than 10 pounds per square foot. h. Glazing used in handrail assemblies and guards shall be designed with a load adjustment factor of 4. The load adjustment factor shall be applied to each of the concentrated loads applied to the top of the rail, and to the load on the in-fill components. These loads shall be determined independent of one another, and loads are assumed not to occur with any other live load. i. Where the top of a guard system is not required to serve as a handrail, the single concentrated load shall be applied at any point along the top, in the vertical downward direction and in the horizontal direction away from the walking surface. Where the top of a guard is also serving as the handrail, a single concentrated load shall be applied in any direction at any point along the top. Concentrated loads shall not be applied concurrently. j. Where structural tables in Section R507 only specify snow loads, the values corresponding to 70 psf snow loads shall be used.							TABLE R301.5 MINIMUM UNIFORMLY DISTRIBUTED LIVE LOADS (in pounds per square foot)			Use	Uniform Loads (psf)	Concentrated Load (lb)	Uninhabitable attics without storage ^b	10	-	Uninhabitable attics with limited storage ^{b, g}	20	-	Habitable attics and attics served with fixed stairs	30	-	Balconies (exterior) and decks ^g	60 ^j	-	Fire escapes	40	-	Guards	-	200 ^{h,i}	Guard in-fill components ^f	-	50 ^h	Handrail ^d	-	200 ^h	Passenger vehicle garages	50 ^a	2,000 ^a	Areas other than sleeping areas	40	-	Sleeping areas	30	-	Stairs	40 ^c	300 ^c

51-51-0302	Fire Resistant Construction	R302.2.4	R302.2.4	2018 cycle added amendment to address new definition of Townhouse Unit (WSR 19-16-156)	Repeal Existing Amendment		Edited at 7/29 Meeting. WAC language is identical to model code language in 2024. Suggest adoption of model language.
	R302.2.4 Parapets for townhouses. Parapets constructed in accordance with Section R302.2.5 shall be constructed for <i>townhouses</i> as an extension of exterior walls or common walls separating <i>townhouse units</i> in accordance with the following: 1. Where roof surfaces adjacent to the wall or walls are at the same elevation, the parapet shall extend not less than 30 inches (762 mm) above the roof surfaces decks . 2. Where roof surfaces decks adjacent to the wall or walls are at different elevations and the higher roof deck is not more than 30 inches (762 mm) above the lower roof deck , the parapet shall extend not less than 30 inches (762 mm) above the lower roof surface deck . EXCEPTION: A parapet is not required in the preceding two cases where the roof covering complies with a minimum Class C rating as tested in accordance with ASTM E108 or UL 790 and the roof decking deck or sheathing is of noncombustible materials or fire retardant-treated wood for a distance of 4 feet (1219 mm) on each side of the wall or walls, or one layer of 5/8-inch (15.9 mm) Type X gypsum board is installed directly beneath the roof decking deck or sheathing, supported by not less than nominal 2-inch (51 mm) ledgers attached to the sides of the roof framing members, for a distance of not less than 4 feet (1219 mm) on each side of the wall or walls and any openings or penetrations in the roof deck are not within 4 feet (1219 mm) of the common walls. Fire retardant-treated wood shall meet the requirements of Sections R802.1.5 and R803.2.1.2. 3. A parapet is not required where roof surfaces adjacent to the wall or walls are at different elevations and the higher roof deck is more than 30 inches (762 mm) above the lower roof deck . The common wall construction from the lower roof deck to the underside of the higher roof deck shall have not less than a 1-hour fire-resistance rating. The wall shall be rated for exposure from both sides. Openings shall not be permitted in the wall.						
	Fire Resistant Construction	T R302.1(1)	T R302.1(1)	2009 cycle introduced amendment. Specific rationale not included in CR document. (WSR 09-17-140) 2012 cycle modifications made to align with model code changes. (WSR 12-16-091) Removed amendment in 2015 cycle (WSR 15-16-086) 2018 cycle brought back amendment to address a situation where there are no vents at the underside of the rake overhang, or in any walls underneath the rake overhang. (WSR 19-16-156)	Repeal Existing Amendment		Proposal needed, Model Language has same regulatory effect.
	TABLE R302.1(1) EXTERIOR WALLS No Change to the Table a. The fire-resistance rating shall be permitted to be reduced to 0 hours on the underside of the eave overhang if fireblocking is provided from the wall top plate to the underside of the roof sheathing. b. The fire-resistance rating shall be permitted to be reduced to 0 hours on the underside of the rake overhang where gable-vent ventilation openings that communicate with the attic are not installed in the overhang or gable wall in the rake overhang or in walls that are common to attic areas.						
51-51-0302	Fire Resistant Construction	T R302.1(2)	T R302.1(2)	2012 cycle introduced amendment. Specific rationale not included in CR document. (WSR 12-16-091) Removed amendment in 2015 cycle (WSR 15-16-086) 2018 cycle brought back amendment to address a situation where there are no vents at the underside of the rake overhang, or in any walls underneath the rake overhang. (WSR 19-16-156)	Repeal Existing Amendment		Proposal needed, Model Language has same regulatory effect.

Fire Resistant Construction	R302.13	R302.13	2015 cycle adds amendment to further define dimensional lumber. (WSR 15-16-056)	Modify Existing Amendment		Proposal Needed. Incorporate new model code language Exception #5											
R302.13 Fire protection of floors. Floor assemblies that are not required elsewhere in this code to be fire-resistance rated, shall be provided with a 1/2-inch (12.7 mm) gypsum wallboard membrane, 5/8-inch (16 mm) wood structural panel membrane, or equivalent on the underside of the floor framing member. Penetrations or openings for ducts, vents, electrical outlets, lighting, devices, luminaires, wires, speakers, drainage, piping and similar openings or penetrations shall be permitted. EXCEPTIONS: 1. Floor assemblies located directly over a space protected by an automatic sprinkler system in accordance with Appendix AWU, NFPA 13D, or other approved equivalent sprinkler system. 2. Floor assemblies located directly over a crawl space not intended for storage or fuel-fired appliances. 3. Portions of floor assemblies shall be permitted to be unprotected when complying with the following: 3.1. The aggregate area of the unprotected portions shall not exceed 80 square feet (7.4 m2) per story. 3.2. Fire blocking in accordance with Section R302.11.1 is installed along the perimeter of the unprotected portion to separate the unprotected portion from the remainder of the floor assembly. 4. Wood floor assemblies using dimension lumber or structural composite lumber with a cross sectional area equal to or greater than 2-inch by 10-inch (50.8 mm by 254 mm) nominal dimension, or other approved floor assemblies demonstrating equivalent fire performance. 5. Wood floor assemblies less than 600 square feet (55.7 m²) within detached accessory structures with no habitable space above them.

	Light, Ventilation and Heating	R303.9	R325.1.1		Repeal Existing Amendment		Proposal Needed. Section moved and combined with Section R325.1.1 Natural Light.
	R303.9 Required glazed openings. Required glazed openings shall open directly onto a street or public alley, or a yard or court located on the same <i>lot</i> as the building. EXCEPTIONS: 1. Required glazed openings that face into a roofed porch where the porch abuts a street, yard or court are permitted where and the longer side of the porch is not less than 65 percent unobstructed and the ceiling height is not less than 7 feet (2134 mm). 2. Eave projections shall not be considered as obstructing the clear open space of a yard or court. 3. Required glazed openings that face into the area under a deck, balcony, bay or floor cantilever are permitted where an unobstructed pathway of where a clear vertical space not less than 36 inches (914 mm) in height, 36 inches (914 mm) in width, and no greater than 60 inches (1524 mm) in length is provided and opens to a yard or court. The pathway shall be measured from the exterior face of the glazed opening, or if the glazed opening is in a window well, at the window well wall furthest from the exterior face of the glazed opening.						
	Light, Ventilation and Heating	R303.10	R325.8		Keep Existing Amendment		
	R303.10 Required heating. When the winter design temperature in Table R301.2 is below 60°F (16°C), every <i>dwelling unit</i> shall be provided with heating facilities capable of maintaining a minimum room temperature of 68°F (20°C) at a point 3 feet (914 mm) above the floor and 2 feet (610 mm) from exterior walls in all habitable rooms at design temperature. The installation of one or more portable heaters shall not be used to achieve compliance with this section. EXCEPTION: Unheated recreational tents or yurts not exceeding 500 square feet provided it is not occupied as a permanent dwelling.						
	Light, Ventilation and Heating	R303.10.1	NA		Keep Existing Amendment		Target After Section R325.8
	R303.10.1 Definitions. For the purposes of this section only, the following definitions apply. DESIGNATED AREAS are those areas designated by a county to be an urban growth area in chapter 36.70A RCW and those areas designated by the U.S. Environmental Protection Agency as being in nonattainment for particulate matter. SUBSTANTIALLY REMODELED means any alteration or restoration of a building exceeding 60 percent of the appraised value of such building within a 12-month period. For the purpose of this section, the appraised value is the estimated cost to replace the building and structure in kind, based on current replacement costs.						
	Light, Ventilation and Heating	R303.10.2	NA		Keep Existing Amendment		Target After Section R325.8
	R303.10.2 Primary heating source. Primary heating sources in all new and substantially remodeled buildings in designated areas shall not be dependent upon wood stoves.						
	Light, Ventilation and Heating	R303.10.3	NA		Keep Existing Amendment		Target After Section R325.8
	R303.10.3 Solid fuel burning devices. No new or used solid fuel burning device shall be installed in new or existing buildings unless such device is U.S. Environmental Protection Agency certified or exempt from certification by the United States Environmental Protection Agency and conforms with RCW 70A.15.1005, 70A.15.3500, 70A.15.3510, and 70A.15.3530. EXCEPTIONS: 1. Wood cook stoves. 2. Antique wood heaters manufactured prior to 1940.						
51-51-307	Toilet, Bath and Shower Spaces	R307.1	R327.1		Modify Existing Amendment	Edited 7/29. Verify no other UPC Sections potentially applicapble	Proposal Needed. Remove Plumbing code section reference 402.5 to reduce correlation issues arising from future modifications or renumbering.
	R307.1 Space required. Fixtures shall be spaced in accordance with Figure R307.1, and in accordance with the requirements of the state plumbing code Section 402.5.

	R309.6 Electric vehicle charging. Where provided, electric vehicle charging systems shall be installed in accordance with NEPA 70 . Electric vehicle charging system equipment shall be <i>listed and labeled</i> in accordance with UL 2202 . <i>Electric vehicle supply equipment</i> shall be <i>listed and labeled</i> in accordance with UL 2594 R309.6.1 Application: The provisions of this section shall apply to the construction of new dwelling units per Section R101.2 with attached private garages or attached private carports. EXCEPTION: Where there is no public utility or commercial power supply.						
	Garages and Carports	R309.6.2	NA		Keep Existing Amendment	Edited 7/29. Patrick/Quyen to work 2024 EV Section	Target Location 317.6.1
	R309.6.21 Dedicated circuit for electric vehicle charging. A minimum of one 40-ampere dedicated 208/240-volt branch circuit shall be installed in the electrical panel for each dwelling unit. The branch circuit shall terminate at a junction box, receptacle outlet, or electric vehicle charging equipment.						
51-51-03100	Emergency Escape and Rescue Openings	R310.1	R319.1		Modify Existing Amendment		Proposal needed. Incorporate Model Language Changes
	R310.1 Emergency escape and rescue opening required. Basements, habitable attics, the room to which a sleeping loft is open and every sleeping room shall have not less than one operable emergency escape and rescue opening. Where basements contain one or more sleeping rooms, an emergency escape and rescue opening shall be required in each sleeping room. Emergency escape and rescue openings shall open directly into a public way, or to a yard or court providing an unobstructed path with a having a minimum width of not less than 36 inches (914 mm) that opens to a public way. EXCEPTIONS: Storm shelters and bBasements used only to house mechanical equipment not exceeding a total floor area of 200 square feet (18.58 m). Storm shelters constructed in accordance with ICC 500. - Where the <i>dwelling unit</i> or <i>townhouse unit</i> is equipped with an automatic sprinkler system installed in accordance with Section P2904, sleeping rooms in basements shall not be required to have emergency escape and rescue openings provided that the basement has one of the following: - One means of egress complying with Section R311 and one emergency escape and rescue opening. - Two means of egress complying with Section R311. - A yard shall not be required to open directly into a public way where the yard opens to an unobstructed path from the yard to the public way. Such path shall have a width of not less than 36 inches (914 mm). The following shall not be considered obstructions: - Gates with operational constraints and opening control devices without the use of keys, tools, or special knowledge. - Window wells equipped with a removable cover complying with Section R310.4.4.						
	Emergency Escape and Rescue Openings	R310.2.4	R319.2.4		Keep Existing Amendment		
	R310.2.4 Emergency escape and rescue openings under decks, porches, and cantilevers. Emergency escape and rescue openings installed under decks, porches, and cantilevers shall be fully openable and provided with an unobstructed pathway of not less than 36 inches (914 mm) in height, 36 inches (914 mm) in width, and no greater than 60 inches (1524 mm) in length that opens to a yard or court. The pathway shall be measured from the exterior face of the glazed opening, or if the glazed opening is in a window well, at the window well wall furthest from the exterior face of the glazed opening.						
	Emergency Escape and Rescue Openings	R310.5	R319.5		Keep Existing Amendment		
	R310.5 Replacement windows for emergency escape and rescue openings. This section is not adopted. Replacement windows installed in buildings meeting the scope of this code shall be exempt from Sections R310.2 and R310.4.4, provided that the replacement window meets the following conditions: 1.—The replacement window is the manufacturer’s largest standard size window that will fit within the existing frame or existing rough opening. The replacement window is of the same operating style that provides for an equal or greater window opening are than the existing window. 2.—The replacement window is not part of a change of occupancy.						
51-51-0311	Means of Egress	R311.4	R318.4		Modify Existing Amendment		Proposal Needed. Incorporate model language change.

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	R311.4 Vertical egress. Egress from basements and habitable levels including habitable attics and basements not provided with an egress door in accordance with Section R311.2 shall be by a ramp in accordance with Section R311.8 or a stairway in accordance with Section R311.7. EXCEPTION: Stairways, alternating tread devices, ship's ladders, or ladders within an individual dwelling unit or sleeping unit used for access to areas of 200 square feet (18.6 m2) or less, are exempt from the requirements of Sections R311.4 and R311.7, where such devices do not provide exclusive access to a kitchen or bathroom. Such areas shall not be located more than 10 feet (3048 mm) above the finished floor of the space below.						
	Means of Egress	R311.7.11	R318.7.12		Keep Existing Amendment		
	R311.7.11 Alternating tread devices. <i>Alternating tread devices</i> shall not be used as an element of a means of egress. <i>Alternating tread devices</i> shall be permitted provided that a required means of egress stairway or ramp serves the same space at each adjoining level or where a means of egress is not required. The clear width at and below the handrails shall be not less than 20 inches (508 mm). EXCEPTION: Not adopted. Alternating tread devices are allowed to be used as an element of a means of egress for lofts, mezzanines and similar areas of 200 gross square feet (18.6 m²) or less that do not provide exclusive access to a kitchen or bathroom.						
	Means of Egress	R311.7.12	R318.7.13		Keep Existing Amendment		
	R311.7.12 Ship's ladders. Ship's ladders shall not be used as an element of a means of egress. Ship's ladders shall be permitted provided that a required means of egress stairway or ramp serves the same space at each adjoining level or where a means of egress is not required. The clear width at and below the handrails shall be not less than 20 inches (508 mm). EXCEPTION: Not adopted. Ships ladders are allowed to be used as an element of a means of egress for lofts, mezzanines and similar areas of 200 gross square feet (18.6 m²) or less that do not provide exclusive access to a kitchen or bathroom.						
51-51-0312	Guards and Window Fall Protection	R312.1.1	R321.1.1		Keep Existing Amendment		
	R312.1.1 Where required. <i>Guards</i> shall be provided for those portions of open-sided walking surfaces, including floors, mezzanines, lofts in accordance with Section R333 , stairs, ramps, and landings, that are located more than 30 inches (762 mm) measured vertically to the floor or <i>grade</i> below at any point within 36 inches (914 mm) horizontally to the edge of the open side. Insect screening shall not be considered as a <i>guard</i> .						
	Guards and Window Fall Protection	R312.1.2	R321.1.2		Keep Existing Amendment		
	R312.1.2 Height. Required <i>guards</i> at open-sided walking surfaces, including stairs, porches, balconies or landings, shall be not less than 36 inches (914 mm) in height as measured vertically above the adjacent walking surface or the line connecting the <i>nosings</i> . EXCEPTIONS: <i>Guards</i> on the open sides of stairs shall have a height of not less than 34 inches (864 mm) measured vertically from a line connecting the <i>nosings</i>. - Where the top of the <i>guard</i> serves as a handrail on the open sides of stairs, the top of the <i>guard</i> shall be not less than 34 inches (864 mm) and not more than 38 inches (965 mm) as measured vertically from a line connecting the <i>nosings</i>. In areas with ceiling heights of 7 feet (2134 mm) or less in lofts constructed in accordance with Section R333, guards shall not be less than 36 inches (914 mm) in height or one-half of the clear height from the loft floor to the loft ceiling, whichever is less.						
51-51-0313	Automatic Fire Sprinkler Systems	R313.1	R309.1		Keep Existing Amendment		
	R313.1 Townhouse automatic fire sprinkler systems. An automatic residential fire sprinkler system shall be installed in a townhouse unit townhouses . EXCEPTIONS: - An automatic residential fire sprinkler system shall not be required where additions or alterations are made to an existing townhouse unit townhouses that does do not have an automatic residential fire sprinkler system installed. Townhouse buildings containing no more than four townhouse units.						
	Automatic Fire Sprinkler Systems	R313.1.1	R309.1.1		Keep Existing Amendment		
	R313.1.1 Design and installation. Automatic residential fire sprinkler systems for a townhouse unit townhouses shall be designed and installed in accordance with Section P2904 or NFPA 13D.						
	Automatic Fire Sprinkler Systems	R313.2	R309.2		Keep Existing Amendment		
	R313.2 One- and two-family dwellings automatic sprinkler systems. This section is not adopted. An Automatic sprinkler system shall be installed in one- and two-family dwellings. Exception: An automatic sprinkler system shall not be required for additions or alterations to existing buildings that are not already provided with a sprinkler system.						
51-51-0314	Smoke Alarms and Heat Detection	R314.1	R310.1		Keep Existing Amendment		
	R314.1 General. Smoke alarms, heat detectors, and heat alarms shall comply with NFPA 72 and this section.						
	Smoke Alarms and Heat Detection	R314.1.1	R310.1.1		Modify Existing Amendment		Proposal Needed. Incorporate Model Code language Change.

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	R314.1.1 Listings. Smoke alarms shall be listed and labeled in accordance with UL 217. Heat detectors and heat alarms shall be listed and labeled for the intended application. Combination smoke and carbon monoxide alarms shall be listed and labeled in accordance with UL 217 and UL 2034.						
	Smoke Alarms and Heat Detection	R314.2	R310.2		Keep Existing Amendment		
	R314.2 Where required. Smoke alarms, heat detectors, and heat alarms shall be provided in accordance with this section.						
	Smoke Alarms and Heat Detection	R314.2.1	R310.2.1		Keep Existing Amendment		
	R314.2.1 New construction. Smoke alarms shall be provided in <i>dwelling units</i> . A heat detector or heat alarm shall be provided in new attached garages.						
	Smoke Alarms and Heat Detection	R314.2.2	R310.2.2		Keep Existing Amendment		
	R314.2.2 Alterations, repairs and additions. Where <i>alterations, repairs or additions</i> requiring a permit occur, or where one or more sleeping rooms are added or created in existing dwellings, or where an accessory dwelling unit is created within an existing dwelling unit, each the individual dwelling unit shall be equipped with smoke alarms as required for new dwellings. EXCEPTIONS: 1. Work involving the exterior surfaces of dwellings, such as the replacement of roofing or siding, the addition or replacement of windows or doors, or the addition of a porch or deck are exempt from the requirements of this section. 2. Installation, <i>alteration</i> or repairs of plumbing, electrical or mechanical systems are exempt from the requirements of this section.						
	Smoke Alarms and Heat Detection	R314.2.3	NA		Keep Existing Amendment		Target Location R310.2.3
	R314.2.3 New attached garages. A heat detector or heat alarm rated for the ambient outdoor temperatures and humidity shall be installed in new garages that are attached to or located under new and existing dwellings. Heat detectors and heat alarms shall be installed in a central location and in accordance with the manufacturer's instructions. EXCEPTION: Heat detectors and heat alarms shall not be required in dwellings without commercial power.						
	Smoke Alarms and Heat Detection	R314.3	R310.3		Modify Existing Amendment		Proposal Needed. Incorporate Model Language Change.
	R314.3 Location. Smoke alarms shall be installed in the following locations: 1. In each sleeping room. 2. Outside each separate sleeping area in the immediate vicinity of the bedrooms. 3. On each additional story of the dwelling unit , including basements and habitable attics but not including crawl spaces and uninhabitable attics. In dwellings or dwelling units with split levels and without an intervening door between the adjacent levels, a smoke alarm installed on the upper level shall suffice for the adjacent lower level provided that the lower level is less than one full story below the upper level. 4. Smoke alarms shall be installed not less than 3 feet (914 mm) horizontally from the door or opening of a bathroom that contains a bathtub or shower unless this would prevent placement of a smoke alarm required by Section R314.3. 5. In napping areas in a family home child care. 6. In the hallway and in the room open to the hallway in dwelling units where the ceiling height of a room open to a hallway serving bedrooms exceeds that of the hallway by 24 inches (610 mm) or more. 7. Within the room to which a sleeping loft is open, in the immediate vicinity of the sleeping loft.						
	Smoke Alarms and Heat Detection	R314.4	R310.4		Keep Existing Amendment		
	R314.4 Interconnection. Where more than one smoke alarm is required to be installed within an individual <i>dwelling unit</i> in accordance with Section R314.3, the alarm devices shall be interconnected in such a manner that the actuation of one alarm will activate all of the alarms in the individual <i>dwelling unit</i> . Where an accessory dwelling unit is created within an existing dwelling unit all required smoke alarms, in the accessory dwelling unit and the primary dwelling unit, shall be interconnected in such a manner that the actuation of one alarm will activate all alarms in both the primary dwelling unit and the accessory dwelling unit. Physical interconnection of smoke alarms shall not be required where listed wireless alarms are installed and all alarms sound upon activation of one alarm. EXCEPTION: Smoke alarms and alarms installed to satisfy Section R314.4.1 shall not be required to be interconnected to existing smoke alarms where such existing smoke alarms are not interconnected or where such new smoke alarm or alarm is not capable of being interconnected to the existing smoke alarms.						
	Smoke Alarms and Heat Detection	R314.4.1	NA		Keep Existing Amendment		Target Location R310.4.1
	R314.4.1 Heat detection interconnection. Heat detectors and heat alarms shall be connected to an alarm or a smoke alarm that is installed in the <i>dwelling</i> . Alarms and smoke alarms that are installed for this purpose shall be located in a hallway, room, or other location that will provide occupant notification.						
	Smoke Alarms and Heat Detection	R314.6	R310.6		Keep Existing Amendment

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	R330.8.4.1 Vertical grab bars. Vertical grab bars shall be a minimum of 18 inches (457 mm) long and installed at the control end wall and head end wall. Grab bars shall mount within 4 inches (102 mm) of the exterior of the bathtub edge or within 4 inches (102 mm) within the bathtub. The bottom end of the bar shall start between 36 inches (914 mm) and 42 inches (1067 mm) above floor grade. EXCEPTION: The required vertical grab bar can be substituted with a floor to ceiling grab bar meeting the requirements of Section R325.8 at the control end and head end entry points.						
	Adult Family Homes	R330.8.4.2	NA		Keep Existing Amendment		Target Section R333.7.4.2
	R330.8.4.2 Horizontal grab bars. Horizontal grab bars shall be provided at the control end, head end, and the back wall within the bathtub area. Grab bars shall be mounted between 33 inches (838 mm) and 36 inches (914 mm) above floor grade. Control end and head end grab bars shall be 24 inches (610 mm) minimum in length. Back wall grab bars shall be 36 inches (914 mm) minimum in length.						
	Adult Family Homes	R330.8.5	NA		Keep Existing Amendment		Target Section R333.7.5
	R330.8.5 Grab bars at shower stalls. Where shower stalls are provided to meet the requirements for bathing facilities, grab bars shall meet the requirements of Section R330.8 R333.7. EXCEPTION: Shower stalls with permanent built-in seats are not required to have vertical or horizontal grab bars at the seat end wall. A vertical floor to ceiling grab bar shall be installed within 4 inches of the exterior of the shower aligned with the nose of the built-in seat.						
	Adult Family Homes	R330.8.5.1	NA		Keep Existing Amendment		Target Section R333.7.5.1
	R330.8.5.1 Vertical grab bars. Vertical grab bars shall be 18 inches (457 mm) minimum in length and installed at the control end wall and head end wall. Vertical bars shall be mounted within 4 inches (102 mm) of the exterior of the shower stall or within 4 inches (102 mm) inside the shower stall. The bottom end of vertical bars mount between 36 inches (914 mm) and 42 inches (1067 mm) above floor grade.						
	Adult Family Homes	R330.8.5.2	NA		Keep Existing Amendment		Target Section R333.7.5.2
	R330.8.5.2 Horizontal grab bars. Horizontal grab bars shall be installed on all sides of the shower stall mounted between 33 inches (838 mm) and 36 inches (914 mm) above the floor grade. Horizontal grab bars shall be a maximum of 6 inches (152 mm) from adjacent walls. Horizontal grab bars shall not interfere with shower control valves.						
	Adult Family Homes	R330.9	NA		Keep Existing Amendment		Target Section R333.8
	R330.9 Ramps. All interior and exterior ramps, when provided, shall be constructed in accordance with Section R311.8 R318.8 with a maximum slope of 1 vertical to 12 horizontal. The exception to Section R311.8.1 is not allowed for adult family homes. Handrails shall be installed in accordance with Section R330.9.1.						
	Adult Family Homes	R330.9.1	NA		Keep Existing Amendment		Target Section R333.8.1
	R330.9.1 Handrails for ramps. Handrails shall be installed on both sides of ramps between the slope of 1 vertical to 12 horizontal and 1 vertical and 20 horizontal in accordance with Sections R311.8.3.1 R318.8.3.1 through R311.8.3.3 R318.8.3.3.						
	Adult Family Homes	R330.10	NA		Keep Existing Amendment		Target Section R333.9
	R330.10 Stair treads and risers. Stair treads and risers shall be constructed in accordance with Section R311.7.5 R318.7.5. Handrails shall be installed in accordance with Section R330.10.1.						
	Adult Family Homes	R330.10.1	NA		Keep Existing Amendment		Target Section R333.9.1
	R330.10.1 Handrails for treads and risers. Handrails shall be installed on both sides of treads and risers numbering from one riser to multiple risers. Handrails shall be installed in accordance with Sections R311.7.8.1 R318.7.8.1 through R311.7.8.4 R318.7.8.4.						
	Adult Family Homes	R330.11	NA		Keep Existing Amendment		Target Section R333.10
	R330.11 Shower stalls. Where provided to meet the requirements for bathing facilities, the minimum size of shower stalls for an adult family home shall be 30 inches (762 mm) deep by 48 inches (1219 mm) long.						
51-51-0331	Family Home Child Care	R331.1	NA		Keep Existing Amendment		Target Section R334.1

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	Section R331—Family home child care. R331.1 Family home child care. For family home child care with more than six children, each floor level used for family child care purposes shall be served by two remote means of egress. Exterior exit doors shall be operable from the inside without the use of keys or any special knowledge or effort. Basements located more than 4 feet below grade level shall not be used for family home child care unless one of following conditions exist: 1. Stairways from the basement open directly to the exterior of the building without entering the first floor; 2. One of the two required means of egress discharges directly to the exterior from the basement level, and a self-closing door is installed at the top or bottom of the interior stair leading to the floor above; 3. One of the two required means of egress is an operable window or door, approved for emergency escape or rescue, that opens directly to a public street, public alley, yard or exit court; or 4. An automatic residential sprinkler system shall be designed and installed in accordance with Section P2904 or NFPA 13D. Floors located more than 4 feet above grade level shall not be occupied by children in family home child care. EXCEPTION: 1. Use of toilet facilities while under supervision of an adult staff person; 2. Family home child care may be allowed on the second story if one of the following conditions exists: 2.1. Stairways from the second story open directly to the exterior of the building without entering the first floor; 2.2. One of the two required means of egress discharges directly to the exterior from the second story level, and a self-closing door is installed at the top or bottom of the interior stair leading to the floor below; or 2.3. An automatic residential sprinkler system shall be designed and installed in accordance with Section P2904 or NFPA 13D. Every sleeping or napping room in a family home child care shall have at least one operable window for emergency rescue. EXCEPTION: Sleeping or napping rooms having doors leading to two separate means of egress, or a door leading directly to the exterior of the building. Smoke alarms shall be installed in accordance with the requirements of new construction per Section R314 R310. In addition to the required smoke alarms, a heat alarm shall be provided in each kitchen.						
	Family Home Child Care	R331.2	NA		Keep Existing Amendment		Target Section R334.2
	R331.2 Additional requirements for family home child care with thirteen to sixteen children. In addition to the requirements of Section 331.1 R334.1 the provisions of this section shall apply to <i>family home child care</i> with thirteen to sixteen children.						
	Family Home Child Care	R331.2.1	NA		Keep Existing Amendment		Target Section R334.2.1
	R331.2.1 Illumination in the event of power failure. In addition to illumination requirements of Section R311.7.9 R318.7.10 , an artificial light source that activates upon termination of building power supply shall be installed at all interior stairs serving child care areas.						
	Family Home Child Care	R331.2.2	NA		Keep Existing Amendment		Target Section R334.2.2
	R331.2.2 Exterior exit doors serving child care areas. Exterior exit doors serving child care areas shall comply with the requirements of Sections R311.2 R318.2 and R311.3 R318.3 .						
	Family Home Child Care	R331.3	NA		Keep Existing Amendment		Target Section R334.3
	R331.3 Sprinklers. An automatic residential sprinkler system shall be designed and installed in accordance with Section P2904 or NFPA 13D. EXCEPTION: Subject to approval of the <i>code official</i>, a sprinkler system is not required where all of the following conditions are met: 1. Child care areas are located on a floor within 4 feet of grade level; 2. Each room used for child care shall have a door compliant with Section R311.2 R318.2 and R311.3 R318.3, leading directly to the exterior of the building. The exterior landing at the door shall comply with Section R311.3 R318.3 but need not comply with Section R311.3.1 R318.3.1.						
51-51-0332	Protection Against Radon	R332.1	NA		Keep Existing Amendment		Target Section R335.1
	Section R332—Protection against radon. R332.1 Protection against radon. The radon control provisions of Appendix F of this code shall apply to buildings constructed in high radon potential counties (zone 1) designated in Table AFB E101(1). The radon control provisions of Appendix F BE of this code shall also apply to all buildings constructed using the provisions of Section R408.3 Unvented crawl space compliance method.

	R403.1.1 Minimum size. The minimum width, W, and thickness, T, for concrete footings shall be in accordance with Tables R403.1(1) through R403.1(3) and Figure R403.1(1) or R403.1.3, as applicable, but not less than 12 inches (305 mm) in width and 6 inches (152 mm) in depth. The footing width shall be based on the load-bearing value of the soil in accordance with Table R401.4.1. Footing projections, P, shall be not less than 2 inches (51 mm) and shall not exceed the thickness of the footing. Footing thickness and projection for fireplaces shall be in accordance with Section R1001. The size of footings supporting piers and columns shall be based on the tributary load and allowable soil pressure in accordance with Table R401.4.1. Footings for wood foundations shall be in accordance with the details set forth in Section R403.2, and Figures R403.1(2) and R403.1(3). Footings for precast foundation shall be in accordance with the details set forth in Section R403.4, Table R403.4, and Figures R403.4(1) and R403.4(2). Crushed stone footings for cast-in-place concrete foundations shall be in accordance with Section R403.5. EXCEPTION: Light-frame construction shall be permitted to have minimum footing size in accordance with Figures R403.1.1(1) through R403.1.1(4) in lieu of that determined by Table R403.1(1).

51-51-0408	Under Floor Space	R408.1	R408.1		Keep Existing Amendment		
	R408.1 Ventilation Moisture Control. The under-floor space between the bottom of the floor joists and the earth under any building (except space occupied by a basement) shall have ventilation openings through foundation walls or exterior walls. A ground cover of six mil (0.006 inch thick) black polyethylene or approved equal shall be laid over the ground within crawl spaces. The ground cover shall be overlapped 6 inches (152 mm) minimum at the joints and shall extend to the foundation wall. comply with R408.2 or R408.3 EXCEPTION: The ground cover may be omitted in crawl spaces if the crawl space has a concrete slab floor with a minimum thickness of 2 inches (51 mm).						
	Under Floor Space	R408.2	R408.2		Keep Existing Amendment		

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	R408.2 Openings for under-floor ventilation. Ventilation openings through foundations or exterior walls surrounding the under-floor space shall be provided in accordance with this section. The minimum net area of ventilation openings shall be not be less than 1 square foot (0.0929 m²) for each 300-150 square feet (28 14 m²) of under-floor area. Required openings shall be evenly placed to provide cross ventilation of the space except one side of the building shall be permitted to have no ventilation openings. One ventilation opening shall be within 3 feet (915 mm) of each external corner of the under-floor space. Ventilation openings shall be covered for their height and width with any of the following materials provided that the least dimension of the covering shall not exceed 1/4 inch (6.4 mm), and operational louvers are permitted: 1. Perforated sheet metal plates not less than 0.070 inch (1.8 mm) thick. 2. Expanded sheet metal plates not less than 0.047 inch (1.2 mm) thick. 3. Cast-iron grill or grating. 4. Extruded load-bearing brick vents. 5. Hardware cloth of 0.035 inch (0.89 mm) wire or heavier. 6. Corrosion-resistant wire mesh, with the least dimension being 1/8 inch (3.2 mm). EXCEPTION: 1. The total area of ventilation openings shall be permitted to be reduced to 1/1,500 of the under-floor area where the ground surface is covered with an approved Class I vapor retarder material and the required openings are placed to provide cross ventilation of the space. The installation of operable louvers shall not be prohibited. If the installed ventilation is less than 1/300, or if operable louvers are installed, a radon vent shall be installed to originate from a point between the ground cover and soil. The radon vent shall be installed in accordance with the requirements of Appendix AF BE (Radon) of this code. 2.—Where the ground surface is covered with an approved Class 1 vapor retarder material, ventilation openings are not required to be within 3 feet (915 mm) of each external corner of the under-floor space provided that the openings are placed to provide cross ventilation of the space.						
	Under Floor Space	R408.3	R408.3		Keep Existing Amendment		
	R408.3 Unvented crawl space. Ventilation openings in for unvented under-floor spaces specified in Section R408.2 the following shall not be required where be provided: 1. Exposed earth is shall be covered with a continuous Class I vapor retarder. Joints of the vapor retarder shall overlap by 6 inches (152 mm) and shall be sealed or taped. The edges of the vapor retarder shall extend at least not less than 6 inches (152 mm) up the stem wall and shall be attached and sealed to the stem wall or insulation; and a radon system shall be installed that meets the requirements of Appendix AF BE (Radon) of this code. 2. One of the following shall be provided for the underfloor space: 2. 2.4Continuously operated mechanical exhaust ventilation is provided at a rate equal to 1 cubic foot per minute (0.47 L/s) for each 50 square feet (4.7 m2) of crawlspace floor area including an air pathway to the common area (such as a duct or transfer grille); and perimeter walls insulated in accordance with Section N1102.2.10.1 of this code. Exhaust ventilation shall terminate to the exterior. EXCEPTION: Plenum in existing structures complying with Section M1601.5, if under-floor space is used as a plenum. 2.2—Conditioned air supply sized to deliver at a rate equal to 1 cubic foot per minute (0.47 L/s) for each 50 square feet (4.7 m²) of underfloor area, including a return pathway to the common area (such as a duct or transfer grille); and perimeter walls insulated in accordance with N1102.2.10.1 of this code. 2.3—Plenum in existing structures complying with Section M1601.5, if under-floor space is used as a plenum. 2.4—Dehumidification sized in accordance with manufacturers specifications.						
	Under Floor Space	R408.8	R408.8		Keep Existing Amendment		
	R408.8 Under-floor vapor retarder. This section is not adopted. In Climate Zones 1A, 2A and 3A below the warm-humid line, a continuous Class I or II vapor retarder shall be provided on the exposed face of air-permeable insulation installed between the floor joists and exposed to the grade in the under-floor space. The vapor retarder shall have a maximum water vapor permeance of 1.5 perms when tested in accordance with Procedure B of ASTM E96. Exception: The vapor retarder shall not be required in unvented crawl spaces constructed in accordance with Section R408.3

CHAPTER 7 WALL COVERING (Part III Building Planning and Construction)							
	Interior Covering	R702.5	R702.5		Keep Existing Amendment		
	R702.5 Other finishes. Wood veneer paneling and hardboard paneling shall be placed on wood or cold-formed steel framing spaced not more than 16 inches (406 mm) on center. Wood veneer and hardboard paneling less than 1/4-inch (6 mm) nominal thickness shall not have less than a 3/8-inch (10 mm) gypsum board or gypsum panel product backer. Wood veneer paneling not less than 1/4-inch (6 mm) nominal thickness shall conform to ANSI/HPVA HP-1. Hardboard paneling shall conform to CPA/ANSI A135.5. All structural panel components within the conditioned space such as plywood, particle board, wafer board and oriented strand board shall be identified as "EXPOSURE 1," "EXTERIOR" or "HUD-APPROVED."						
	Exterior Covering	R703.1.1	R703.1.1		Modify Existing Amendment		Proposal Needed. Incorporate new Model Language
	R703.1.1 Water resistance. The exterior wall envelope shall be designed and constructed in a manner that prevents the accumulation of water within the wall assembly by providing a water-resistant resistive barrier behind the exterior veneer cladding as required by Section R703.2 and a means of draining water that enters the assembly to the exterior. Protection against condensation in the exterior wall assembly shall be provided in accordance with Section R702.7 of this code. EXCEPTION: 1. A weather-resistant exterior wall envelope shall not be required over concrete or masonry walls designed in accordance with Chapter 6 and flashed according to Section R703.4 or R703.8. 2. Compliance with the requirements for a means of drainage, and the requirements of Sections R703.2 and R703.4, shall not be required for an exterior wall envelope that has been demonstrated to resist wind-driven rain through testing of the exterior wall envelope, including joints, penetrations and intersections with dissimilar materials, in accordance with ASTM E 331 under the following conditions: 2.1. Exterior wall envelope test assemblies shall include at least one opening, one control joint, one wall/eave interface and one wall sill. All tested openings and penetrations shall be representative of the intended end-use configuration. Exterior wall envelope test assemblies shall be at least 4 feet (1219 mm) by 8 feet (2438 mm) in size. 2.2. Exterior wall assemblies shall be tested at a minimum differential pressure of 6.24 pounds per square foot (299Pa). 2.3. Exterior wall envelope assemblies shall be subjected to a minimum test exposure duration of 2 hours. 3. The requirement for a means of drainage shall not be construed to mean an air space cavity under the exterior cladding for an exterior wall clad with panel or lapped siding made of plywood, engineered wood, hardboard, or fiber cement. A water-resistive barrier as required by Section R703.2 will be required on exterior walls. The exterior wall envelope design shall be considered to resist wind-driven rain where the results of testing indicate that water did not penetrate control joints in the exterior wall envelope; joints at the perimeter of openings s penetration; or intersections of terminations with dissimilar materials.						
	Exterior Covering	R703.10.2	703.10.2		Keep Existing Amendment		
	R703.10.2 Lap siding. Fiber-cement lap siding having a maximum width of 12 inches (305 mm) shall comply with the requirements of ASTM C 1186, Type A, minimum Grade II or ISO 8336, Category A, minimum Class 2. Lap siding shall be lapped a minimum of 1 1/4 inches (32 mm) and lap siding shall be installed in accordance with the manufacturer's installation instructions or shall be designed to comply with Section R703.1. Lap siding courses shall be installed with the fastener heads exposed or concealed, in accordance with Table R703.3(1) or approved manufacturer's instructions.						
CHAPTER 8 ROOF-CEILING CONSTRUCTION (Part III Building Planning and Construction)							
	NA	NA	NA	NA	NA	NA	NA
No Existing Amendments in Chapter 8							
CHAPTER 9 ROOF ASSEMBLIES (Part III Building Planning and Construction)							
	Weather Protection	R903.4.1	R903.4.1		Keep Existing Amendment		Verify Sections of UPC are accurate
	R903.4.1 Secondary (emergency overflow) drains or scuppers. Where roof drains are required, secondary emergency overflow drains or scuppers shall be provided where the roof perimeter construction extends above the roof in such a manner that water will be entrapped if the primary drains allow buildup for any reason. Overflow drains having the same size as the roof drains shall be installed with the inlet flow line located 2 inches (51 mm) above the low point of the roof, or overflow scuppers having three times the size of the roof drains and having a minimum opening height of 4 inches (102 mm) shall be installed in the adjacent parapet walls with the inlet flow located 2 inches (51 mm) above the low point of the roof served. The installation and sizing of overflow drains, leaders and conductors shall comply with Sections 1101 and 1103 of the state plumbing code 1106 and 1108 of the International Plumbing Code . Overflow drains shall discharge to an approved location.						
CHAPTER 10 CHIMNEYS AND FIREPLACES (Part III Building Planning and Construction)							
	Masonry Fireplaces	R1001.7.1			Keep Existing Amendment		

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	R1001.7.1 Damper. Masonry fireplaces shall be equipped with a ferrous metal damper located at least not less than 8 inches (203 mm) above the top of the fireplace opening. Dampers shall be installed in the fireplace or the chimney venting the fireplace, and shall be operable from the room containing the fireplace. Fireplaces shall be provided with each of the following: 1. Tightly fitting flue dampers, operated by a readily accessible manual or approved automatic control. EXCEPTION: Fireplaces with gas logs shall be installed in accordance with the <i>International Mechanical Code</i> Section 901, except that the standards for liquefied petroleum gas installations shall be NFPA 58 (<i>Liquefied Petroleum Gas Code</i>) and NFPA 54 (<i>National Fuel Gas Code</i>). 2. An outside source for combustion air ducted into the firebox. The duct shall be at least 6 square inches (3870 mm ²), and shall be provided with an operable outside air duct damper. 3. Site built fireplaces shall have tight-fitting glass or metal doors, or a flue draft induction fan or as approved for minimizing back-drafting. Factory built fireplaces shall use doors listed for the installed appliance.						
	Masonry Heaters	R1002.2	R1002.2		Keep Existing Amendment		
	R1002.2 Installation. <i>Masonry heaters</i> shall be installed in accordance with this section and shall be a masonry heater type approved by the department of ecology. Masonry heaters shall comply with one of the following: 1. <i>Masonry heaters</i> shall comply with the requirements of ASTM E 1602; or 2. <i>Masonry heaters</i> shall be <i>listed</i> and <i>labeled</i> in accordance with UL 1482 or CEN 15250 and installed in accordance with the manufacturer's installation instructions.						
	Masonry Heaters	R1002.2.1	NA		Keep Existing Amendment		2024 Target R1002.2.1
	R1002.2.1 Combustion air and doors. Masonry heaters shall be provided with both of the following: 1. Primary combustion air ducted from the outside of the structure to the appliance. 2. Tight-fitting ceramic glass or metal doors. Flue dampers, when provided, shall have an external control and when in the closed position shall have a net free area of not less than five percent of the flue cross sectional area.						
	Factory-Built Fireplaces	R1004.1.1	NA		Keep Existing Amendment		2024 Target R1004.1.1
	R1004.1.1 Emission standards for factory-built fireplaces. No new or used factory-built fireplace shall be installed in Washington state unless it is certified and labeled in accordance with procedures and criteria specified in ASTM E2558 Standard Test Method for determining particulate matter emission from fires in wood burning fireplaces. To certify an entire fireplace model line, the internal assembly shall be tested to determine its particulate matter emission performance. Retesting and recertifying is required if the design and construction specifications of the fireplace model line internal assembly change. Testing for certification shall be performed by a Washington state department of ecology (DOE) approved and U.S. Environmental Protection Agency (EPA) accredited laboratory.						
	Factory-Built Fireplaces	R1004.1.2	NA		Keep Existing Amendment		2024 Target R1004.1.2
	R1004.1.2 Emission standards for certified masonry and concrete fireplaces. Masonry and concrete fireplace model lines certified to Washington State Building Code Standard 31-2 prior to July 1, 2013, may retain certification provided the design and construction specifications of the fireplace model line internal assembly do not change.						
	Exterior Air Supply	R1006.4	R1006.4		Keep Existing Amendment		
	R1006.4 Passageway. This section is not adopted. The combustion air passageway shall be not less than 6 square inches (3870 mm²) and not more than 55 square inches (0.035 m²); except that combustion air systems for listed fireplaces shall be constructed in accordance with the fireplace manufacturer's instructions.						
	Exterior Air Supply	R1006.6	NA		Keep Existing Amendment		2024 Target R1006.6

[illegible]

	Evaporative Cooling Equipment	M1413.1	M1413.2		Keep Existing Amendment		Verify Section in UPC is Accurate. Reference "WASHINGTON" STATE PLUMBING CODE
	M1413.1 General. Evaporative <i>cooling equipment</i> and <i>appliances</i> shall comply with UL 1995 or UL/CSA/ANCE 60335-2-40 and shall be installed: 1. In accordance with the manufacturer's instructions. 2. On level platforms in accordance with M1305.1.3.1. 3. So that openings in exterior walls are flashed in accordance with Section R703.4. 4. So as to protect the potable water supply in accordance with Section 603 of the state plumbing code P2902 . 5. So that air intake opening locations are in accordance with Section R303.5.1.						
CHAPTER 15 EXHAUST SYSTEMS (Part V Mechanical)							
	Domestic Cooking Exhaust Equipment	M1503.2.1			Keep Existing Amendment		
	M1503.2.1 Open-top broiler exhaust. Domestic open-top broiler units shall be provided with a metal exhaust hood, having a minimum thickness of not less than 0.0157 inch (0.3950 mm) (No. 28 gage). Such hoods shall be installed with a clearance of not less than 1/4 inch (6.4 mm) between the hood and the underside of combustible material or and cabinets. A clearance of not less than 24 inches (610 mm) shall be maintained between the cooking surface and the combustible material or and cabinets. The hood width shall be not be less than the width of the broiler unit and shall extend over the entire unit. EXCEPTIONS: 1. Broiler units that incorporate an integral exhaust system, and that are listed and labeled for use without an exhaust hood, shall not be required to have an exhaust hood. 2. Broiler units permanently installed outside the building envelope and having the cooking surface at least 5 feet below a 1-hour fire resistance rated ceiling shall not be required to have an exhaust hood.						
	Domestic Cooking Exhaust Equipment	M1503.3	M1503.3		Keep Existing Amendment		
	M1503.3 Exhaust discharge. Domestic cooking exhaust equipment shall discharge to the outdoors through a duct. The duct shall have a smooth interior surface, shall be airtight, shall be equipped with a backdraft damper and shall be independent of all other exhaust systems. Ducts serving domestic cooking exhaust equipment shall not terminate in an attic or crawl space or areas inside the building. EXCEPTION: Where installed in accordance with the manufacturer's instructions, and where continuous local exhaust is provided in an enclosed kitchen in accordance with Table M1505.4.4.1 and where mechanical or natural ventilation is otherwise provided, listed and labeled ductless range hoods shall not be required to discharge to the outdoors.						
	Domestic Cooking Exhaust Equipment	M1503.5	M1503.5		Modify Existing Amendment		Proposal Needed. Incorporate Model language Changes.
	M1503.5 Kitchen exhaust rates. Where domestic kitchen cooking appliances are provided equipped with ducted range hoods or down-draft exhaust equipment systems, the fans shall be sized in accordance with Section M1505.4.4.1 the exhaust rate shall equal or exceed the airflow required in Table m1505.5 at one or more speed settings.						
	Exhaust Ducts and Exhaust Openings	M1504.3	M1504.3		Modify Existing Amendment		Proposal Needed. Incorporate new model language.
	M1504.3 Exhaust openings. Air exhaust openings shall terminate as follows: 1. Not less than 3 feet (914 mm) from property lines. 2. Not less than 3 feet (914 mm) from gravity air intake openings, operable windows and doors except where the exhaust opening is located not less than 1 foot (305 mm) above the gravity air intake opening, operable windows and doors. 3. Not less than 10 feet (3048 mm) from mechanical air intake openings except where either of the following apply: except where the exhaust opening is located not less than 3 feet (914 mm) above the air intake opening. Openings shall comply with Sections R303.5.2 and R303.6: 3.1. The exhaust opening is located not less than 3 feet (914 mm) above the air intake opening. 3.2. The exhaust opening is part of a factory-built intake/exhaust combination termination fitting installed in accordance with the fan manufacturer's instructions, and the exhaust air is drawn from a living space. 4. Openings shall comply in accordance with Sections R303.5.2 and R303.6.						
	Mechanical Ventilation	M1505.1	M1505.1		Keep Existing Amendment		
	M1505.1 General. Where local exhaust or whole-house mechanical <i>ventilation</i> is provided, the ventilation system shall be designed in accordance with this section. EXCEPTION: Alternate balanced whole-house <i>ventilation</i> systems and local exhaust systems designed and commissioned in accordance with ASHRAE 62.2 are permitted.						
	Mechanical Ventilation	M1505.4	M1505.4		Keep Existing Amendment

Commented [DC4]: New model language here is the same as 2021 amendment language.

Commented [DC5]: New model language here is the same as 2021 amendment language.

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	M1505.4 Whole-house mechanical ventilation system. Each dwelling unit shall be equipped with a ventilation system. The whole-house mechanical ventilation systems shall be designed in accordance with Sections M1505.4.1 through M1505.4.4.						
	Mechanical Ventilation	M1505.4.1	M1505.4.1		Keep Existing Amendment		
	M1505.4.1 System design. The whole-house ventilation system shall consist of one or more supply or exhaust fans, or a combination of such, and one or more exhaust fans, or an ERV/HRV with integral fans, associated ducts and controls. Whole-house mechanical ventilation system supply and exhaust fans shall meet the requirements of Sections M1505.4.1.2, M1505.4.1.3, M1505.4.1.4, and M1505.4.1.5. Local exhaust or supply fans are permitted to serve as such a system part of the whole-house ventilation system when provided with the proper controls in accordance with Section M1505.4.2. The systems shall be designed and installed to exhaust and/or supply the minimum outdoor airflow rates required by Section M1505.4.3 as modified by whole-house ventilation system coefficients in Section M1505.4.3.1 where applicable. The whole-house ventilation system shall operate continuously at the minimum ventilation rate required by Section M1505.4.2 unless configured with intermittent off controls in accordance with Section M1505.4.3.2. Outdoor air ducts connected to the return side of an air handler shall be considered as providing supply ventilation.						
	Mechanical Ventilation	M1505.4.1.1	NA		Keep Existing Amendment		2024 Target M1505.4.1.1
	M1505.4.1.1 Whole-house system component requirements. Whole-house ventilation supply and exhaust fans specified in this section shall have a minimum efficacy as prescribed in the <i>Washington State Energy Code</i> . Design and installation of the system or equipment shall be carried out in accordance with manufacturers' installation instructions. Whole-house ventilation fans shall be rated for sound at no less than the minimum airflow rate required by Section M1505.4.3.1. Ventilation fans shall be rated for sound at a maximum of 1.0 sone. This sound rating shall be at a minimum of 0.1 in. w.c. (25 Pa) static pressure in accordance with HVI procedures specified in Sections M1505.4.1.2 and M1505.4.1.3. EXCEPTION: HVAC air handlers, ERV/HRV units, and remote mounted fans need not meet the sound requirements. To be considered for this exception, a remote mounted fan must be mounted outside the habitable spaces, bathrooms, toilets, and hallways, and there must be at least 4 feet (1.3 m) of ductwork between the fan and the intake grille. The whole-house supply fan shall provide ducted outdoor ventilation air to each habitable space within the residential unit. EXCEPTION: Interior joining spaces provided with a 30 cfm whole-house transfer fan or a permanent opening with an area of not less than 8 percent of the floor area of the interior adjoining space but not less than 25 square feet do not require ducted outdoor ventilation air to be supplied directly to the space. Whole-house transfer fans shall meet the sone rating of Section M1505.4.1.1 and shall have whole-house ventilation controls that comply with Section M1505.4.2.						
	Mechanical Ventilation	M1505.4.1.2	NA		Keep Existing Amendment		2024 Target M1505.4.1.2
	M1505.4.1.2 Exhaust fans. Exhaust fans required shall be ducted directly to the outside. Exhaust air outlets shall be designed to limit the pressure difference to the outside and equipped with backdraft dampers or motorized dampers in accordance with the <i>Washington State Energy Code</i> . Exhaust fans shall be tested and rated in accordance with the airflow and sound rating procedures of the Home Ventilating Institute (HVI 915, HVI Loudness Testing and Rating Procedure, HVI 916, HVI Airflow Test Procedure, and HVI 920, HVI Product Performance Certification Procedure, as applicable). Exhaust fans required in this section may be used to provide local ventilation. Bathroom exhaust fans that are designed for intermittent exhaust airflow rates higher than the continuous exhaust airflow rates in Table M1505.4.3.2 shall be provided with occupancy sensors or humidity sensors to automatically override the fan to the high speed airflow rate. The exhaust fans shall be tested and the testing results shall be submitted and posted in accordance with Section M1505.4.1.6.						
	Mechanical Ventilation	M1505.4.1.3	NA		Keep Existing Amendment		2024 Target M1505.4.1.3
	M1505.4.1.3 Supply fans. Supply fans used in meeting the requirements of this section shall supply outdoor air from intake openings in accordance with the <i>International Mechanical Code</i> Sections 401.4 and 401.5. When designed for intermittent off operation, supply systems shall be equipped with motorized dampers in accordance with the <i>Washington State Energy Code</i> . Supply fans shall be tested and rated in accordance with the airflow and sound rating procedures of the Home Ventilating Institute (HVI 915, HVI Loudness Testing and Rating Procedure, HVI 916, HVI Airflow Test Procedure, and HVI 920, HVI Product Performance Certification Procedure, as applicable). Where outdoor air is provided by supply fan systems the outdoor air shall be filtered. The filter shall be accessible for regular maintenance and replacement. The filter shall have a Minimum Efficiency Rating Value (MERV) of at least 8.						
	Mechanical Ventilation	M1505.4.1.4	NA		Keep Existing Amendment		2024 Target M1505.4.1.4
	M1505.4.1.4 Balanced whole-house ventilation system. A balanced whole-house ventilation system shall include both supply and exhaust fans. The supply and exhaust fans shall have airflow that is within 10 percent of each other. The tested and balanced total mechanical exhaust airflow rate is within 10 percent or 5 cfm, whichever is greater, of the total mechanical supply airflow rate. The flow rate test results shall be submitted and posted in accordance with Section M1505.4.1.7. The exhaust fan shall meet the requirements of Section M1505.4.1.2. The supply fan shall meet the requirements of Section M1505.4.1.3. Balanced ventilation systems with both supply and exhaust fans in a packaged product, such as an ERV/HRV shall meet the requirements of HVI 920, as applicable. Local exhaust systems that are not a component of the whole-house mechanical ventilation system are exempt from the balanced airflow calculation.						
	Mechanical Ventilation	M1505.4.1.5	NA		Keep Existing Amendment		2024 Target M1505.4.1.5

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	M1505.4.1.5 Furnace integrated supply. Systems using space heating and/or cooling air handler fans for outdoor air supply distribution are not permitted. EXCEPTION: Air handler fans shall have multispeed or variable speed supply airflow control capability with a low speed operation not greater than 25 percent of the rated supply airflow capacity during ventilation only operation. Outdoor air intake openings must meet the provisions of Sections R303.5 and R303.6 and must include a motorized damper that is activated by the whole-house ventilation system controller. The motorized damper must be controlled to maintain the outdoor airflow intake airflow within 10 percent of the whole-house mechanical exhaust airflow rate. The flow rate for the outdoor air intake must be tested and verified at the minimum ventilation fan speed and the maximum heating or cooling fan speed. The results of the test shall be submitted and posted in accordance with Section M1505.4.1.7.						
	Mechanical Ventilation	M1505.4.1.6	NA		Keep Existing Amendment		2024 Target M1505.4.1.6
	M1505.4.1.6 Testing. Whole-house mechanical ventilation systems shall be tested, balanced and verified to provide a flow rate not less than the minimum required by Sections M1505.4.3 and M1505.4.4.1. Testing shall be performed according to the ventilation equipment manufacturer's instructions, or by using a flow hood, flow grid, or other airflow measuring device at the mechanical ventilation fan's inlet terminals, outlet terminals or grilles or in the connected ventilation ducts. Where required by the building official, testing shall be conducted by an approved third party. A written report of the results of the test shall be signed by the party conducting the test and provided to the building official and be posted in the dwelling unit per Section M1505.4.1.7.						
	Mechanical Ventilation	M1505.4.1.7	NA		Keep Existing Amendment		2024 Target M1505.4.1.7
	M1505.4.1.7 Certificate. A permanent certificate shall be completed by the mechanical contractor, test and balance contractor or other approved party and posted on a wall in the space where the furnace is located, a utility room, or an approved location inside the building. When located on an electrical panel, the certificate shall not cover or obstruct the visibility of the circuit directory label, service disconnect label, or other required labels. The certificate shall list the flow rate determined from the delivered airflow of the whole-house mechanical ventilation system as installed and the type of mechanical whole-house ventilation system used to comply with Section M1505.4.3.1.						
	Mechanical Ventilation	M1505.4.2	M1505.4.2		Keep Existing Amendment		
	M1505.4.2 System controls. The whole-house mechanical ventilation system shall be provided with controls that enable manual override. Controls shall include text or a symbol indicating their function. comply with the following: 1. The whole-house ventilation system shall be controlled with manual switches, timers or other means that provide for automatic operation of the ventilation system that are readily accessible by the occupant; 2. Whole-house mechanical ventilation system shall be provided with controls that enable manual override off of the system by the occupant during periods of poor outdoor air quality. Controls shall include permanent text or a symbol indicating their function. Recommended control permanent labeling to include text similar to the following: "Leave on unless outdoor air quality is very poor." Manual controls shall be readily accessible by the occupant; 3. Whole-house ventilation systems shall be configured to operate continuously except where intermittent off controls and sizing are provided in accordance with Section M1505.4.3.2.						
	Mechanical Ventilation	M1505.4.3	M1505.4.3		Keep Existing Amendment		
	M1505.4.3 Mechanical ventilation rate. The whole-house mechanical ventilation system shall provide outdoor air at a continuous rate as determined in accordance with Table M1505.4.3(1) or Equation 15-1. Equation 15-1 Ventilation rate in cubic feet per minute = (0.01 × total square foot area of house) + [7.5 × (number of bedrooms + 1)] but not less than 30 cfm for each dwelling unit EXCEPTIONS: 1. Ventilation rate credit. The minimum mechanical ventilation rate determined in accordance with Table M1505.4.3(1) or Equation 15-1 shall be reduced by 30 percent, provided that both of the following conditions apply: 1.1. —A ducted system supplies ventilation air directly to each bedroom and to one or more of the following rooms: 1.1.1. —Living Room 1.1.2. —Dining Room 1.1.3. —Kitchen 1.2. —The whole-house ventilation system is a balanced ventilation system. 2. Programmed intermittent operation. The whole-house mechanical ventilation system is permitted to operate intermiottently where the system has controls that enable operation for not less than 25 percent of each 4-hour segment and the ventilation rate prescribed in Table M1505.4.3(1), by Equation 15-1 or by Exception 1 is multiplied by the factor determined in accordance with Table M1505.4.3(2)						
	Mechanical Ventilation	T M1505.4.3(1)	T M1505.4.3(1)		Keep Existing Amendment

	M1505.4.4.2 Local exhaust fans. Exhaust fans shall meet the following criteria: 1. Exhaust fans shall be tested and rated in accordance with the airflow and sound rating procedures of the Home Ventilating Institute (HVI 915, HVI Loudness Testing and Rating Procedure, HVI 916, HVI Airflow Test Procedure, and HVI 920, HVI Product Performance Certification Procedure). 2. Fan airflow rating and duct system shall be designed and installed to deliver at least the exhaust airflow required by Table M1505.4.4.1. The airflows required refer to the delivered airflow of the system as installed and tested using a flow hood, flow grid, or other airflow measurement device. Local exhaust systems shall be tested, balanced, and verified to provide a flow rate not less than the minimum required by this section. 3. Design and installation of the system or equipment shall be carried out in accordance with manufacturers' installation instructions. 4. Intermittent local exhaust systems serving kitchens shall be rated for sound at a maximum of 3 sones at one or more airflow settings not less than 100 cfm at a static pressure not less than that determined at working speed as specified in HVI 916 Section 7.2. 5. Continuous local exhaust systems serving kitchens shall be rated for sound at a maximum of 1 sone at one or more airflow settings not less than 100 cfm at a static pressure not less than that determined at working speed as specified in HVI 916 Section 7.2. EXCEPTIONS: 1. The installed airflow is not required to be field-verified where an exhaust airflow rating at a pressure of 0.25 in. w.g. is used, provided the duct sizing meets the prescriptive requirements of Table M1505.4.4.2. 2. Remote mounted fans need not meet sound requirements. To be considered for this exception, a remote mounted fan shall be mounted outside the kitchen, and there shall be at least 4 feet (1 m) of ductwork between the fan and the intake grille.

Chapter 20—Boilers and water heaters. Informational Note: Boilers, water heaters and pressure vessels are regulated by chapter 70.79 RCW and chapter 296-104 WAC in addition to the requirements of this code.							
	Water Heaters	M2005.1			Keep Existing Amendment		
Section M2005.1 General. Water heaters shall be installed in accordance with Chapter 28 5 of the state plumbing code , the manufacturer's instructions and the requirements of this code. Water heaters installed in an attic shall comply with the requirements of Section M1305.1.2. Gas-fired water heaters shall comply with the requirements in Chapter 24. Domestic electric water heaters shall comply with UL 174. Oil-fired water heaters shall comply with UL 732. Thermal solar thermat water heaters heating systems shall comply with Chapter 23 and ICC 900/SRCC 300 UL 174 . Solid fuel-fired water heaters shall comply with UL 2523.							
CHAPTER 21 HYDRONIC PIPING (Part V Mechanical)							
	Hydronic Piping Systems Installation	M2101.3	M2101.3		Keep Existing Amendment		
M2101.3 Protection of potable water. The potable water system shall be protected from backflow in accordance with the provisions listed in Section P2902 603 of the state plumbing code .							
	Floor Heating Systems	M2103.3	M2103.3		Keep Existing Amendment		
M2103.3 Piping joints. Copper and copper alloy systems shall be soldered, brazed, or press connected. Soldering shall be in accordance with ASTM B 828. Fluxes for soldering shall be in accordance with ASTM B 813. Brazing fluxes shall be in accordance with AWS A5.31. Press-connect joints shall be in accordance with ASME B16.51. Piping joints that are embedded shall be installed in accordance with the following requirements: 1. Steel pipe joints shall be welded. 2. Copper tubing shall be joined by brazing complying with Section P3003.6.4 605 of the state plumbing code . 3. Polybutylene pipe and tubing joints shall be installed with socket-type heat-fused polybutylene fittings. 4. CPVC tubing shall be joined using solvent cement joints. 5. Polypropylene pipe and tubing joints shall be installed with socket-type heat-fused polypropylene fittings. 6. Cross-linked polyethylene (PEX) tubing shall be joined using cold expansion, insert or compression fittings. 7. Raised temperature polyethylene (PE-RT) tubing shall be joined using insert or compression fittings.							
	Ground-Source Heat-Pump System Loop Piping	M2105.9	M2105.9		Keep Existing Amendment		
M2105.9 CPVC plastic pipe. Joints between CPVC plastic pipe or fittings shall be solvent-cemented in accordance with Section P2906.9.1.2 605 of the state plumbing code . Threaded joints between fittings and CPVC plastic pipe shall be in accordance with Section M2105.9.1.							
	Ground-Source Heat-Pump System Loop Piping	M2105.14	M2105.14		Keep Existing Amendment		
M2105.14 PVC plastic pipe. Joints between PVC plastic pipe or fittings shall be solvent-cemented in accordance with Section P2906.9.1.4 605 of the state plumbing code . Threaded joints between fittings and PVC plastic pipe shall be in accordance with Section M2105.9.1.							
	Ground-Source Heat-Pump System Loop Piping	M2105.18	M2105.18		Keep Existing Amendment		
M2105.18 Protection of potable water. Where ground-source heat-pump ground-loop systems have a connection to a potable water supply, the potable water system shall be protected from backflow in accordance with Section P2902 603 of the state plumbing code .							
	Ground-Source Heat-Pump System Loop Piping	M2105.19	M2105.19		Keep Existing Amendment		
M2105.19 Pipe penetrations. Openings for pipe penetrations in walls, floors and ceilings shall be larger than the penetrating pipe. Openings through concrete or masonry building elements shall be sleeved. The annular space surrounding pipe penetrations shall be protected in accordance with Section P2606.4 312 of the state plumbing code .

	Solar Thermal Energy Systems	M2301.2.3	M2301.2.3		Keep Existing Amendment		
	M2301.2.3 Pressure and temperature relief valves and system components. System components containing fluids shall be protected with temperature and pressure relief valves or pressure relief valves. Relief devices shall be installed in sections of the system so that a section cannot be valved off or isolated from a relief device. Direct systems and the potable water portion of indirect systems shall be equipped with a relief valve in accordance with Section P2804 504 of the state plumbing code . For indirect systems, pressure relief valves in solar loops shall comply with SRCC 300. System components shall have a working pressure rating of not less than the setting of the pressure relief device.						
	Solar Thermal Energy Systems	M2301.2.5	M2301.2.5		Keep Existing Amendment		
	M2301.2.5 Piping insulation. Piping shall be insulated in accordance with the requirements of Chapter 14 the state energy code . Exterior insulation shall be protected from ultraviolet degradation. The entire solar loop shall be insulated. Where split-style insulation is used, the seam shall be sealed. Fittings shall be fully insulated. Exceptions: 1.—Those portions of the piping that are used to help prevent the system from overheating shall not be required to be insulated: 2.—Those portions of piping that are exposed to solar radiation, made of the same material as the solar collector absorber plate and are covered in the same manner as the solar collector absorber, or that are used to collect additional solar energy, shall not be required to be insulated: 3.—Piping in thermal solar systems using unglazed solar collectors to heat a swimming pool shall not be required to be insulated:						
	Solar Thermal Energy Systems	M2301.4	M2301.4		Keep Existing Amendment		
	M2301.4 Heat transfer gasses or liquids and heat exchangers. <i>Essentially toxic transfer fluids</i> , ethylene glycol, flammable gasses and flammable liquids shall not be used as heat transfer fluids. Heat transfer gasses and liquids shall be rated to withstand the system's maximum design temperature under operating conditions without degradation. Heat exchangers used in solar thermal systems shall comply with Section P2902.5.2 603.5.4 of the state plumbing code and ICC 900/SRCC 300 . Heat transfer fluids shall be in accordance with ICC 900 /SRCC 300. The flash point of the heat transfer fluids utilized in solar thermal systems shall be not less than 50 degrees F above the design maximum nonoperating or no-flow temperature attained by the fluid in the collector.						
	Solar Thermal Energy Systems	M2301.7	M2301.7		Keep Existing Amendment		
	M2301.7 Solar thermal systems for heating potable water. Where a solar thermal system heats potable water to supply a potable hot water distribution system, the solar thermal system shall be in accordance with Sections M2301.7.1, M2301.7.2 and P2902.5.5 the state plumbing code .						
	Solar Thermal Energy Systems	M2301.7.1	M2301.7.1		Keep Existing Amendment		
	M2301.7.1 Indirect systems. Heat exchangers that are components of indirect solar thermal heating systems shall comply with P2902.5.2 the state plumbing code .						
	Solar Thermal Energy Systems	M2301.7.2	M2301.7.2		Keep Existing Amendment		
	M2301.7.2 Direct systems. Where potable water is directly heated by a solar thermal system, the pipe, fittings, valves and other components that are in contact with the potable water in the solar heating system shall comply with the requirements of Chapter 29-6 of the state plumbing code .

	Compliance	R4502.5.2	NA		Keep Existing Amendment		
	R4502.5.2 Safety glazing. Replacement glazing in hazardous locations shall comply with the safety glazing requirements of Section R308.						
	Compliance	R4502.5.3	NA		Keep Existing Amendment		
	R4502.5.3 Window fall protection. Window fall protection shall be installed in accordance with Section R312.2. EXCEPTION: Where only the window glazing is being replaced.						
	Compliance	R4502.5.4	NA		Keep Existing Amendment		
	R4502.5.4 Replacement windows for emergency escape and rescue openings. Replacement windows shall be exempt from Sections R310.2 and R310.4.4, provided that the replacement window meets the following conditions: 1. The replacement window is the manufacturer's largest standard size window that will fit within the existing frame or existing rough opening. The replacement window is of the same operating style as the existing window or a style that provides for an equal or greater window opening area than the existing window. 2. The replacement window is not part of a change of use.						
	Compliance	R4502.5.5	NA		Keep Existing Amendment		
	R4502.5.5 Window opening control device and fall protection device height. Window opening control devices or fall protection device shall be located at a height in accordance with Section R310.1.1 or at as low a height as can be installed within the existing clear opening.						
	Compliance	R4502.6	NA		Keep Existing Amendment		
	R4502.6 Flood hazard areas. Work performed in existing buildings located in a flood hazard area as established by Table R301.2 shall be subject to the provisions of Section R105.3.1.1.						
	Repairs	R4503.1	NA		Keep Existing Amendment		
	R4503.1 General. <i>Repairs</i> shall comply with the applicable provisions of the code for new construction or as permitted by this section. Work on undamaged components that is necessary for the required repair of damaged components shall be considered part of the repair and shall not be subject to requirements for <i>alterations</i> .						
	Repairs	R4503.2	NA		Keep Existing Amendment		
	R4503.2 Materials. Materials used during <i>repairs</i> shall comply with this section.						
	Repairs	R4503.2.1	NA		Keep Existing Amendment		
	R4503.2.1 New and replacement materials. Except as otherwise required or permitted by this code, materials permitted by this code for new construction, shall be used. Like materials shall be permitted for <i>repairs</i> , provided that <i>unsafe</i> conditions are not created. Hazardous materials shall not be used where this code does not permit their use in buildings of similar occupancy, purpose, and location.						
	Repairs	R4503.2.2	NA		Keep Existing Amendment		
	R4503.2.2 Existing materials. Materials already in use in a building in compliance with requirements or approvals in effect at the time of their erection or installation shall be permitted to remain in use unless determined by the building official to be <i>unsafe</i> .						
	Repairs	R4503.2.3	NA		Keep Existing Amendment		
	R4503.2.3 Plumbing materials and supplies. The following plumbing materials and supplies shall not be used: 1. All-purpose solvent cement, unless listed for the specific application. 2. Flexible traps and tailpieces, unless listed for the specific application. 3. Solder having more than 0.2-percent lead in the repair of potable water systems.						
	Repairs	R4503.3	NA		Keep Existing Amendment		
	R4503.3 Water closets. Where any water closet is replaced with a newly manufactured water closet, the replacement water closet shall comply with the requirements of Uniform Plumbing Code Section 411.						
	Repairs	R4503.4	NA		Keep Existing Amendment		
	R4503.4 Structural. Repaired structural elements and systems shall comply with Section R102.7.1 and the structural provisions of this chapter.						
	Repairs	R4503.5	NA		Keep Existing Amendment		

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	R4503.5 Demolition and replacement. Where a building or structure is effectively demolished by damage or where the intended method of repair is demolition and replacement, the replaced building, including its replaced foundation, shall comply with requirements for new construction in the <i>International Residential Code</i> . EXCEPTION: Existing foundations are permitted to remain and be reused where approved by the code official.						
	Alterations	R4504.1	NA		Keep Existing Amendment		
	R4504.1 General. <i>Alterations</i> to existing buildings shall comply with the provisions of this code for new construction, except as permitted by this section.						
	Alterations	R4504.2	NA		Keep Existing Amendment		
	R4504.2 Newly constructed elements. Newly constructed elements, components, and systems shall comply with the requirements of this code. EXCEPTION: Added openable windows are not required to comply with the light and ventilation requirements of Section R303.						
	Alterations	R4504.3	NA		Keep Existing Amendment		
	R4504.3 Nonconformities. The work shall not increase the extent of noncompliance or create nonconformity to those requirements that did not previously exist.						
	Alterations	R4504.4	NA		Keep Existing Amendment		
	R4504.4 Structural. Altered structural elements and systems shall comply with Section R102.7.1 and the structural provisions of this chapter. New elements shall meet all of the requirements of this code for new construction. Structural elements that are uncovered during the course of the alteration and that are found to be unsafe shall be repaired in accordance with Section R102.7.1.						
	Alterations	R4504.4.1	NA		Keep Existing Amendment		
	R4504.4.1 Decreased structural capacity. Where an alteration causes a decrease in capacity in any structural component, that structural component shall be shown to comply or shall be altered to comply with the applicable provisions of Chapters 3, 4, 5, 6, and 8.						
	Alterations	R4504.4.2	NA		Keep Existing Amendment		
	R4504.4.2 Increased structural loads. Where an alteration causes an increase in loads as described in this section, the existing structural components that support the increased load, including the foundation, shall be shown to comply or shall be altered to comply with the applicable provisions of Chapters 3, 4, 5, 6, and 8. Existing structural components that do not provide support for the increased loads shall not be required to comply with this section.						
	Alterations	R4504.4.2.1	NA		Keep Existing Amendment		
	R4504.4.2.1 Dead load increase. Dead load shall be considered to be increased for purposes of this section when the weight of materials used for the <i>alteration</i> exceeds the weight of the materials replaced, or when new materials or elements are added. EXCEPTION: 1. Buildings in which the increase in dead load is due entirely to the addition of a second layer of roof covering weighing 3 pounds per square foot (0.1437 kN/m2) or less over an existing single layer of roof covering. 2. Installation of rooftop-mounted photovoltaic (PV) panel systems weighing 4 pounds per square foot or less over an existing single layer of roof covering.						
	Alterations	R4504.4.2.2	NA		Keep Existing Amendment		
	R4504.4.2.2 Live load increase. An increase in live load shall be determined based on Table R301.5.						
	Alterations	R4504.4.2.3	NA		Keep Existing Amendment		
	R4504.4.2.3 Snow load increase. Snow load shall be considered to be increased for purposes of this section when alteration of the roof configuration creates new areas that accumulate drifted snow.						
	Alterations	R4504.4.2.4	NA		Keep Existing Amendment		
	R4504.4.2.4 Wind load increase. Wind load shall be considered to be increased for purposes of this section when the surface area of any exterior elevation subject to wind pressure is increased by more than 5 percent.						
	Alterations	R4504.4.2.5	NA		Keep Existing Amendment		
	R4504.4.2.5 Seismic load increase. Seismic load shall be considered to be increased for purposes of this section in <i>existing buildings</i> assigned to Seismic Design Category C, D0, D1, or D2 where new materials replace lighter weight materials in one of the following conditions: 1. Concrete tile or tile roof covering of similar weight is installed on more than 50 percent of the total roof area. 2. Brick veneer or cladding of similar weight is installed on walls above the second story.						
	Alterations	R4504.5	NA		Keep Existing Amendment		

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	R4504.5 Ventilation. Reconfigured spaces intended for occupancy and spaces converted to habitable or occupiable space in any work area shall be provided with ventilation in accordance with Section R303.						
	Alterations	R4504.6	NA		Keep Existing Amendment		
	R4504.6 Ceiling height. Where a habitable attic or habitable space in a basement is created in an existing building, ceiling height shall not be less than 6 foot 8 inches (2032 mm). Bathrooms, toilet rooms, and laundry rooms shall have a ceiling height of not less than 6 feet 4 inches (1931 mm). EXCEPTIONS: 1. For rooms with sloped ceilings, the required floor area of the room shall have a ceiling height of not less than 5 feet (1524 mm) and not less than 50 percent of the required floor area shall have a ceiling height of not less than 6 feet 8 inches (2134 mm). 2. At beams, girders, ducts, or other obstructions, the ceiling height shall be not less than 6 feet 4 inches (1931 mm) from the finished floor.						
	Alterations	R4504.7	NA		Keep Existing Amendment		
	R4504.7 Stairways, handrails, and guards. Stairs, handrails, and guards shall comply with this section.						
	Alterations	R4504.7	NA		Keep Existing Amendment		
	R4504.7.1 Stairway illumination. Stairways within the work area shall be provided with illumination in accordance with Section R303.6.						
	Alterations	R4504.7.2	NA		Keep Existing Amendment		
	R4504.7.2 Stair width. Existing stairs not otherwise being altered or modified shall be permitted to maintain their current clear width at, above and below existing handrails.						
	Alterations	R4504.7.3	NA		Keep Existing Amendment		
	R4504.7.3 Stair headroom. Headroom height on existing stairs being altered or modified shall not be reduced below the existing stairway finished headroom. Existing stairs not otherwise being altered shall be permitted to maintain the current finished headroom.						
	Alterations	R4504.7.4	NA		Keep Existing Amendment		
	R4504.7.4 Stair landing. Landings serving existing stairs being altered or modified shall not be reduced below the existing stairway landing depth and width. Existing stairs not otherwise being altered shall be permitted to maintain the current landing depth and width.						
	Alterations	R4504.7.5	NA		Keep Existing Amendment		
	R4504.7.5 Stair treads and risers. An existing stairway shall not be required to comply with Section R311.7.5 where the existing space and construction does not allow a reduction in pitch or slope. Where risers are added to an existing stair, the tread and riser dimensions of the added risers shall match the existing stair.						
	Alterations	R4504.7.6	NA		Keep Existing Amendment		
	R4504.7.6 Handrails and guards. Where a stair or any portion of a stair is reconstructed, a handrail and guard, where required, shall be provided in accordance with Section R311 and R312.						
	Additions	R4505.1	NA		Keep Existing Amendment		
	R4505.1 Additions to an existing building. Additions shall comply with this section and other applicable provisions of this code for new construction.						
	Additions	R4505.2	NA		Keep Existing Amendment		
	R4505.2 Structure for horizontal additions. Where an addition involves new construction next to and attached to an existing building and includes alterations to the existing building, the <i>addition</i> shall meet all of the requirements of this code for new construction. Alterations to the existing building shall comply with the requirements governing alterations within this code. In wood light-frame additions, connection of the structural components shall be permitted to be provided using wall top plates and addition studs that abut the existing building. Wall top plates shall be lapped and spliced in accordance with Section R602.3.2. Abutting studs shall be fastened in accordance with Table R602.3(1). EXCEPTION: The structural components of the <i>addition</i> shall be permitted to be connected to the existing building in accordance with accepted engineering practice.						
	Additions	R4505.3	NA		Keep Existing Amendment		

WAC	Title or Subject	2021 IRC #	2024 IRC #	Rationale	2024 Staff Recommendation	2024 TAG Member Recommendation	Other Comments
	R4505.3 Structure for vertical additions. Where an addition involves new construction that adds a story to any part of the existing building or vertically increases the height of any part of the existing building, the new construction and the existing building together shall meet all of the requirements of this code for new construction. EXCEPTION: Where the new structure and the existing structure together are evaluated in accordance with accepted engineering practice and are shown to be sufficient to support the combined loads from the new structure and existing structure, no structural alterations are required.						
	Relocations	R4506.1	NA		Keep Existing Amendment		
	R4506.1 Relocated buildings. Residential buildings or structures moved into or within the jurisdiction are not required to comply with the requirements of this code if the original use classification of the building or structure is not changed. Any repair, alteration, or change of use undertaken within the relocated structure shall comply with the requirements of this code applicable to the work being performed.

APPENDIX AF RADON CONTROL METHODS							
	Scope	AF101.1	BE101.1		Keep Existing Amendment		
	AF101.1 General. This appendix contains requirements for new construction in jurisdictions where radon-resistant construction is required. Inclusion of this appendix by jurisdictions shall be required in high radon potential counties as determined through the use of locally available data or determination of Zone 1 designation in Figure AF101 AF101.1 and as listed in Table AF101(1)-AF101.1. Unvented crawl spaces are not permitted in any high radon potential county. In other areas, requirements of this appendix apply to any structure constructed with unvented crawl spaces as specified in R408.3.						
	(FIGURE AF101 EPA MAP OF RADON ZONES LEGEND)  ZONE 1 HIGH POTENTIAL (GREATER THAN 4 pCi/L) [Red/Darkest] ZONE 2 MODERATE POTENTIAL (FROM 2 TO 4 pCi/L) [Orange/Midrange] ZONE 3 LOW POTENTIAL (LESS THAN 2 pCi/L) [Yellow/Lightest] a. pCi/L standard for picocuries per liter of radon gas. EPA recommends that all homes that measure 4 pCi/L and greater be mitigated. The United States Environmental Protection Agency and the United States Geological Survey have evaluated the radon potential in the United States and have developed a map of radon zones designed to assist building officials in deciding whether radon-resistant features are applicable in new construction. The map assigns each of the 3,141 counties in the United States to one of three zones based on radon potential. Each zone designation reflects the average short-term radon measurement that can be expected to be measured in a building without the implementation of radon control methods. The radon zone designation of highest priority is Zone 1. Table 1 of this appendix lists the Zone 1 counties illustrated on the map. More detailed information can be obtained from state-specific booklets (EPA-402-R-93-021 through 070) available through State Radon Offices or from U.S. EPA Regional Offices.

	TABLE AF101(1) HIGH RADON POTENTIAL (ZONE 1) COUNTIES^A [Washington] Clark, Ferry, Okanogan, Pend Oreille, Skamania, Spokane, Stevens.] a. EPA recommends that this county listing be supplemented with other available state and local data to further understand the radon potential of Zone 1 areas.						
	Requirements	AF103.1	BE103.1		Keep Existing Amendment		
	AF103.1 General. The following construction techniques are intended to resist radon entry and prepare the building for post-construction radon mitigation, if necessary (see Figure AF103.1). These techniques are required in high radon potential counties areas where designated in Table AF101(1) by the jurisdiction.

	General Definition	AT102.1	NB102		Keep Existing Amendment		
	Solar-ready zone. A section or sections of the roof or building overhang designated and reserved for the future installation of a solar photovoltaic or solar water-heating thermal system.						
	Solar Ready Zone	AT103.3	NB103.3		Keep Existing Amendment		
	AT103.3 Solar-ready zone area. The total solar-ready zone area shall be not less than 300 square feet (27.87 m2) exclusive of mandatory access or set back areas as required by this code the International Fire Code . New townhouses three stories or less in height above grade plane and with a total floor area less than or equal to 2,000 square feet (185.8 m2) per dwelling shall have a solar-ready zone area of not less than 150 square feet (13.94 m2). The solar-ready zone shall be composed of areas not less than 5 feet (1.52 m 1524 mm) in width and not less than 80 square feet (7.44 m2) exclusive of access or set back areas as required in this code or the applicable provisions of the International Fire Code . No portion of the solar zone shall be located on a roof slope greater than 2:12 that faces within 45 degrees of true north by the International Fire Code .						
	Solar Ready Zone	AT103.6	NB 103.6		Keep Existing Amendment		
	AT103.6 Capped roof penetration sleeve. A capped roof penetration sleeve shall be provided adjacent to a solar-ready zone when the solar-ready zone has a roof slope of 2:12 or less located on a roof slope of not greater than 1 unit vertical in 12 units horizontal (8-percent slope) . The capped roof penetration sleeve shall be sized to accommodate the future photovoltaic system conduit, but shall have an inside diameter not less than 1 1/4 inches.
