

SINGLE EXIT ECONOMIC IMPACT

From Item 7 of Code Change Proposal

If no, state reason:

There is a project cost for either providing two stairs as per model code or for complying with the single exit provisions of this proposed appendix. However While an economic impact analysis is NOT required as this code change has been mandated through state legislation a basic analysis was completed to showing that this code change will reduce costs. Reduction of cost associated with building less area is estimated at \$500,000 and added cost of enhancements is estimated at \$150,000, see attached.
